

STEP 1

Open in full screen

## STEP 2

Zoomed to max, notice the width when max zoomed

## STEP 3

Open console to trigger window resize  
size still same, still fully zoomed

NOTE: fit() and center() was not used when resize

Waiting for ariutta.github.io...

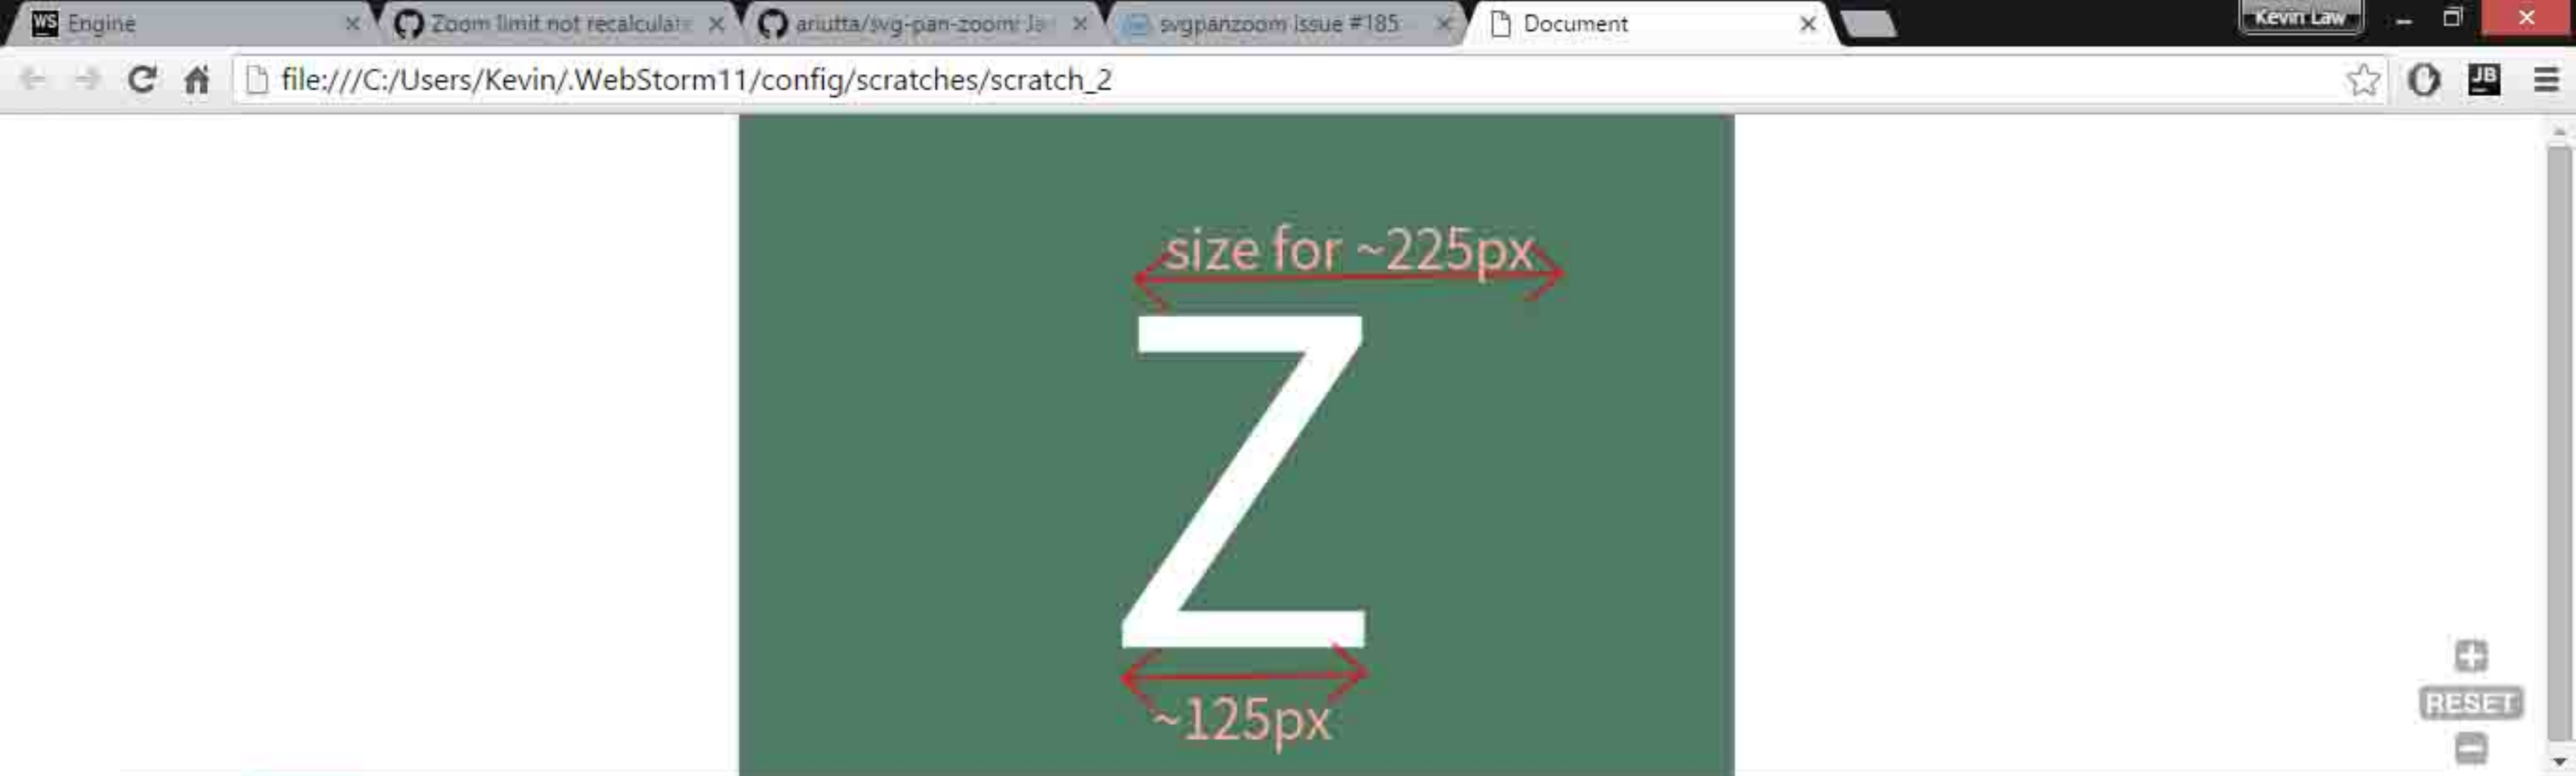

Elements Console Sources Network Timeline Profiles Resources Security Audit

<top frame> Preserve log

## STEP 4

then i refresh the page, the viewport size is now smaller  
“z” is fit to smaller size too  
(still looks ok so far)

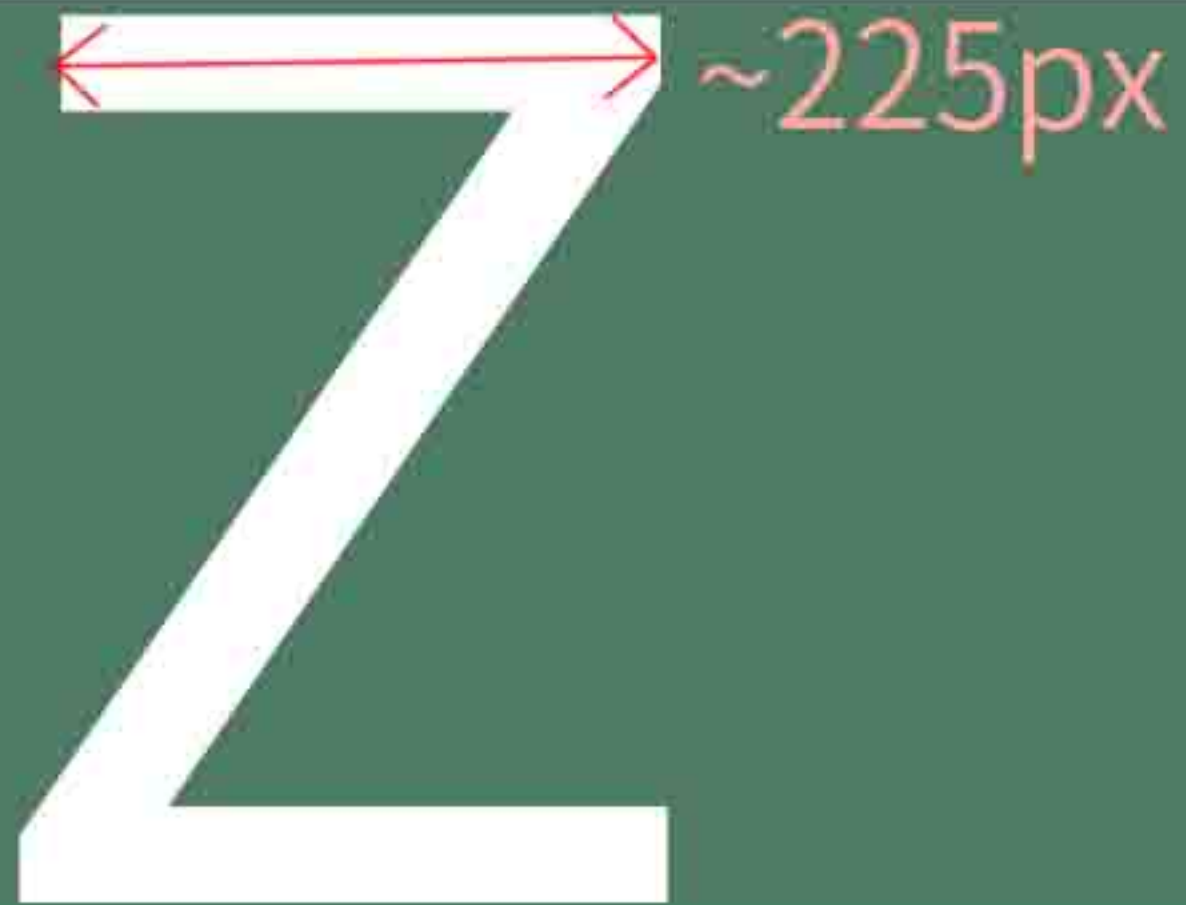

Elements Console Sources Network Timeline Profiles Resources Security Audit

**STEP 5** I fully zoom in the svg, it shows inconsistency the width of z doesnt reach ~225px at all try compare with step 3 (they have same console size and viewport)

# Screenshot comparison

## Step 3

Maximized during load  
Then zoomed to max  
and open console

## Step 5

Console was opened when load,  
then zoomed to max

## STEP 6

Continue from step 5, if i close console now, "z" should have same size like step 2, i.e.

"loaded the svg in maximized window without console"

STEP 7  
I closed console  
  
The size didn't  
change. Size is  
nowhere the  
same like step 2

I tried to zoom to see if it works but it is zoomed to max  
(comparison in next slide)

Step 7  
This is already  
fully zoomed

I expected size like in step 2  
(both are  
fullscreen, max zoomed)
