

## \*Testing display of HTML elements H1

This page contains a bunch of HTML Elements and text.

### \*Text-formatting H2

### \*Headings H3

#### \*H1 - This is 1st level heading

This is a test paragraph.

#### \*H2 - This is 2nd level heading

This is a test paragraph.

#### \*H3 - This is 3rd level heading

This is a test paragraph.

#### \*H4 - This is 4th level heading

This is a test paragraph.

#### H5 - This is 5th level heading

This is a test paragraph.

#### H6 - This is 6th level heading

This is a test paragraph.

### \*Paragraph Alignment H3

#### \*Basic block level elements (align-left) H4

This is a normal paragraph (p element). To add some length to it, let us mention that this page was primarily written for testing the effect of user style sheets. You can use it for various other purposes as well, like just checking how your browser displays various HTML elements.

This is another paragraph. I think it needs to be added that the set of elements tested is not exhaustive in any sense. I have selected those elements for which it can make sense to write user style sheet rules, in my opinion.

This is a div element. Authors may use such elements instead of paragraph markup for various reasons. (End of div.)

This is a block quotation containing a single paragraph. Well, not quite, since this is not really quoted text, but I hope you understand the point. After all, this page does not use HTML markup very normally anyway.

The following contains a link to [oo2.me](http://oo2.me)

#### Basic block level elements (align-right) H4

This is a normal paragraph (p element). To add some length to it, let us mention that this page was primarily written for testing the effect of user style sheets. You can use it for various other purposes as well, like just checking how your browser displays various HTML elements.

This is another paragraph. I think it needs to be added that the set of elements tested is not exhaustive in any sense. I have selected those elements for which it can make sense to write user style sheet rules, in my opinion.

This is a div element. Authors may use such elements instead of paragraph markup for various reasons. (End of div.)

\*Lists H3

\*Unordered List H4

this is the text after  
the something new

---

so it is

This is a paragraph before an unordered list (ul). Note that the spacing between a paragraph and a list before or after that is hard to tune in a user style sheet. You can't guess which paragraphs are logically related to a list, e.g. as a "list header".

- \*One.
- \*Two.
- \*Three. Well, probably this list item should be longer. Note that for short items lists look better if they are compactly presented, whereas for long items, it would be better to have more vertical spacing between items.
- \*Four. This is the last item in this list Let us terminate the list now without making any more fuss about it.

\*Ordered List H4

this is the text after the <>

This is a paragraph before a ordered list (ol). Note that the spacing between a paragraph and a list before or after that is hard to tune in a user style sheet. You can't guess which paragraphs are logically related to a list, e.g. as a "list header".

1. \*One.
2. \*Two.
3. \*Three. Well, probably this list item should be longer. Note that if items are short, lists look better if they are compactly presented, whereas for long items, it would be better to have more vertical

spacing between items.

4. \*Four. This is the last item in this list. Let us terminate the list now without making any more fuss about it.

#### \*Definition List H4

this is the text after the <>

This is a paragraph before a definition list (dl). In principle, such a list should consist of terms and associated definitions. But many authors use dl elements for fancy "layout" things. Usually the effect is not too bad, if you design user style sheet rules for dl which are suitable for real definition lists.

\*recursionsee recursionrecursion, indirectsee indirect recursionindirect recursionsee recursion, indirectterma word or other expression taken into specific use in a well-defined meaning, which is often defined rather rigorously, even formally, and may differ quite a lot from an everyday meaning.

### \*Line Spacing H3

#### \*Line Spacing - Auto H4

This is a normal paragraph (p element). To add some length to it, let us mention that this page was primarily written for testing the effect of user style sheets. You can use it for various other purposes as well, like just checking how your browser displays various HTML elements.

This is another paragraph. I think it needs to be added that the set of elements tested is not exhaustive in any sense. I have selected those elements for which it can make sense to write user style sheet rules, in my opinion.

This is a div element. Authors may use such elements instead of paragraph markup for various reasons. (End of div.)

This is a block quotation containing a single paragraph. Well, not quite, since this is not really quoted text, but I hope you understand the point. After all, this page does not use HTML markup very normally anyway.
