External Wiki URL

Visitors are redirected to the external wiki URL when clicking the wiki tab.

Issues Enable Repository Issue Tracker

Use Built-In Issue Tracker

Enable Time Tracking

Let Only Contributors Track Time

Enable Dependencies For Issues and Pull Requests

Close an issue via a commit made in a non default branch

Use External Issue Tracker

External Issue Tracker URL

Visitors are redirected to the external issue tracker URL when clicking on the issues tab.

External Issue Tracker URL Format
e.g. https://github.com/{user}/{repo}/issues/{index}

Use the placeholders {user}, {repo} and {index} for the username, repository name and issue index.

External Issue Tracker Number Format Numeric (#1234) Alphanumeric (ABC-123, DEFG-234)

Projects Enable Repository Projects

Pull Requests Enable Repository Pull Requests

Ignore Whitespace for Conflicts

Enable Commit Merging

Enable Rebasing to Merge Commits

Enable Rebasing with explicit merge commits (--no-ff)

Enable Squashing to Merge Commits

Enable Mark PR as manually merged

Enable autodetect manual merge (Note: in some special cases, misjudgments can occur)

Delete pull request branch after merge by default

Default merge style for pull requests:
Merge Pull Request

Update Settings

Signing Verification Settings

Signature Trust Model

Default Trust Model
Use the default repository trust model for this installation.

Collaborator: Trust signatures by collaborators
Valid signatures by collaborators of this repository will be marked "trusted" - (whether they match the committer or not). Otherwise, valid signatures will be marked "untrusted" if the signature matches the committer and "unmatched" if not.

Committer: Trust signatures that match committers (This matches GitHub and will force Gitea signed commits to have Gitea as the committer)
Valid signatures will only be marked "trusted" if they match the committer, otherwise they will be marked "unmatched". This will force Gitea to be the committer on signed commits with the actual committer marked as Co-authored-by: and Co-committed-by: trailer in the commit. The default Gitea key must match a User in the database.

Collaborator+Committer: Trust signatures by collaborators which match the committer
Valid signatures by collaborators of this repository will be marked "trusted" if they match the committer. Otherwise, valid signatures will be marked "untrusted" if the signature matches the committer and "unmatched" otherwise. This will force Gitea to be marked as the committer on signed commits with the actual committer marked as Co-Authorred-By: and Co-Committed-By: trailer in the commit. The default Gitea key must match a User in the database.

Transfer Ownership [Transfer Ownership](#)
Transfer this repository to a user or to an organization for which you have administrator rights.

Delete Wiki Data [Delete Wiki Data](#)
Deleting repository wiki data is permanent and cannot be undone.

Delete This Repository [Delete This Repository](#)
Deleting a repository is permanent and cannot be undone.

Archive This Repo [Archive Repo](#)
Archiving the repo will make it entirely read-only. It is hidden from the dashboard, cannot be committed to and no issues or pull-requests can be created.

The provided url is invalid. You must escape all components of the url correctly.
