Test

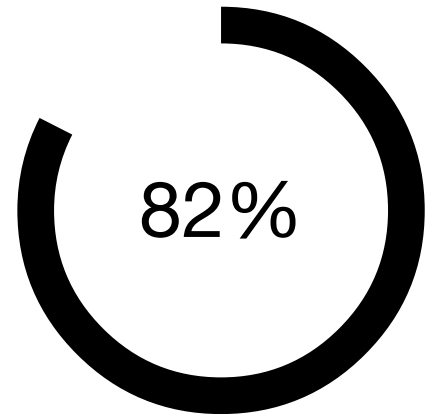

Results

<http://hackforla.org/>

Tested: 3/31/2021 5:29:18 PM

-  146 violations identified
-  266 automated tests run
-  78 additional tests available

 [Get a Free Premium Test](#)

Compliance Score

Next Steps:

- 1. Review your Violations:** You will see a description of each violation along with recommended best practices your team can implement immediately to improve your compliance score.
- 2. Get your Free Premium Test, which includes:**
 - a. 78 additional tests performed on your submitted URL
 - b. Comprehensive downloadable report with test results and best practices
 - c. Unlocks the ability to run the free premium test on additional URLs

Violations

Provide alternative text for images

10

Severity: 10

All images within a page must be given an alternate text equivalent. Text equivalents for non-text elements communicate the meaning of images to users who cannot perceive the image such as users of screen readers. Proper equivalents provide text which contributes the same level of understanding to the content of the page as the image itself. In instances where the image does not contribute to the understanding of the content and is purely decorative, it needs to be marked in a way to indicate its purely decorative purpose.

Ensure links or controls that open new windows or frames do not open without a warning

6

Severity: 6

Developers should avoid creating links or other controls opening new windows without either indicating that fact to users or allowing them to control the focus change.

Exceptions are made if the new window comes in the form of a dialog, one that is either predictable by its context (such as a "Print this page" link that triggers the

browser's Print dialog), or is implemented in an accessible manner (such as a "Delete" image link that triggers a simple JavaScript alert with an "Are you sure you want to delete this?" prompt).

Avoid improper nesting of form elements and links

7

Severity: 7

The improper nesting of form elements can have a significant impact on users of assistive technology. Many HTML elements can be safely nested within certain other HTML elements; a primary example is the image link, which is an `img` image tag enclosed within an `a` link tag. However, in other cases, it is improper to nest HTML elements, particularly those that are used to render active elements such as form controls. For instance, nesting the form element `input` (such as `type=image` for an image button or `type=checkbox` for a checkbox) within an `a` tag is likely to confuse or hinder assistive technology products and, by extension, their users.

A variety of problems can result from improper nesting, depending on the implementation. Screen readers may be unable to correctly identify the type of element that has tab or reading focus in all of the various navigation methods and modes. Keyboard-only users may be unable to invoke the intended active element if the action is fired by the element that does not receive keyboard focus. The distinct visual indication of keyboard focus may also fail to appear. Or the nested elements may merely occupy two stops in the tab order when one would suffice.

Similar issues may occur when links are nested in form labels, when links are nested within form control elements, or, for that matter, when links are nested within links or when form control elements (such as button) are nested inappropriately within other form control elements. (See also the note in the Recommendations tab about HTML validators.)

Ensure markup documents contain well-formed elements

6

Severity: 6

Documents that use markup languages must be well-formed. When documents are not well-formed user agents and/or assistive technology may not correctly parse and render the content to users. Many major user-agents are able to cope well with "bad" markup, however, to be consistent across all platforms and browsers well-formed markup must be used. This is especially important for assistive technology which may or may not be programmed to perform the same level of "coping" that can be found in browsers (which are created by multinational corporations) or assistive technology brands that cost several hundred dollars or more.

Ensure ARIA regions, landmarks and HTML sections are identifiable 3

Severity: 3

When ARIA regions, landmarks or HTML5 section elements are provided, users must be able to distinguish them from other regions, landmarks or sections in the page, particularly when two or more instances of the same type are used. When such an

element does not provide a descriptive label to clearly identify itself, users of screen readers may have trouble locating the correct section or understanding its purpose.
