

# [Guide] OpenFydeOS Kernel 6.6 - Brunch!

[brunch, guide](#)

[DarkevilPT](#) (DarkevilPT) 1 April 26, 2024, 6:31pm

**Source of this is from an top lead FydeOS user Monoco aka Su12 from the Chinese Forums - He is a Legend!**

“Preventing disturbances: / FydeOS do not guarantee stability; if data is lost, it’s your responsibility. / The original FydeOS kernel is already well-configured, so don’t tinker with it. / **Don’t blindly copy and paste commands.** / We do not provide any basic knowledge teaching. / Sound issues may be due to kernel or configuration file problems. / If you need configuration, make the changes yourself.”

You can also try on the Steam Deck.

1. Download the release version at <https://github.com/Damenly/brunch-unstable/releases>  
If you’re using a Surface device, choose the Surface option; if it’s a regular device, **choose the Chromebook image**. Make sure to **download the firmware** as well.

- On FydeV18 you have to **turn Developer mode ON!** and **Disable the RootFS!**

[crosh](#) (Open browser type ctrl alt t)

```
crosh> shell
chronos@amd64-fydeos_iris / $ sudo -i
amd64-fydeos_iris ~ # /usr/sbin/crossystem_mode-switch.sh disable-rootfs-verification
Successfully disabled rootfs verification. A reboot is required to activate these changes.
Would you like to reboot now? [Y/N] y
```

```
/usr/sbin/crossystem_mode-switch.sh disable-rootfs-verification
```

Line by line do:

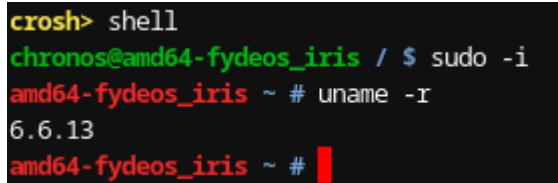

```
sudo -i
mount -oremount,rw /
```

```
#--For usb users only
[ -d /efi ] || mkdir /efi
mount /dev/sda12 /efi || true #Only for usb users
--#

rm -rf /lib/modules/*
rm -rf /lib/firmware
cd /home/chronos/user/Downloads
tar -xvf chromebook-6.6.tar.gz -C /
tar -xvf firmware.tar.gz -C /

cp /vmlinuz /efi/syslinux/vmlinuz.A
#cp /vmlinuz /efi/syslinux/vmlinuz.B
cp /vmlinuz /boot/vmlinuz
```

- Always check if file names match the written commands off course.
- Restart at the end.

```
crosh> shell
chronos@amd64-fydeos_iris / $ sudo -i
amd64-fydeos_iris ~ # uname -r
6.6.13
amd64-fydeos_iris ~ #
```

- 
- » I dont know yet the advantages of brunch as I am new to this as well. So... good luck lads.
- » This only works for x86 and amd64 systems not for arm single board architectures.

- This is meant to add more driver compatability such as wifi sound etc... good luck.
- This also upgrade your android version from 9 to 11 on arevm.
