

# OpenTransportMeetup

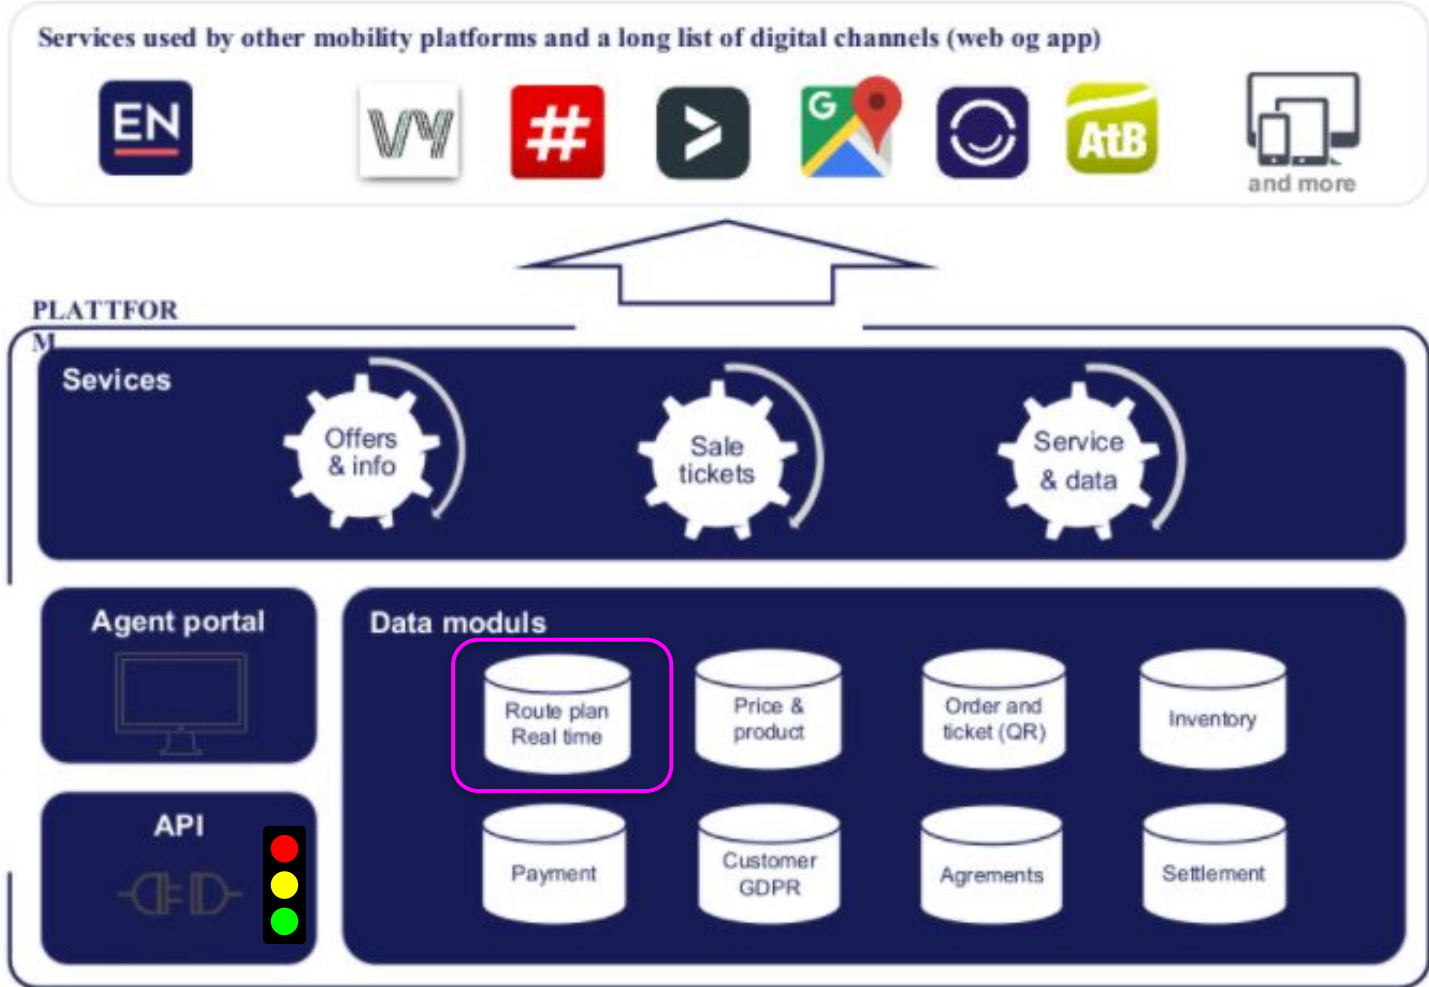

08.03.2023

Mobility hub

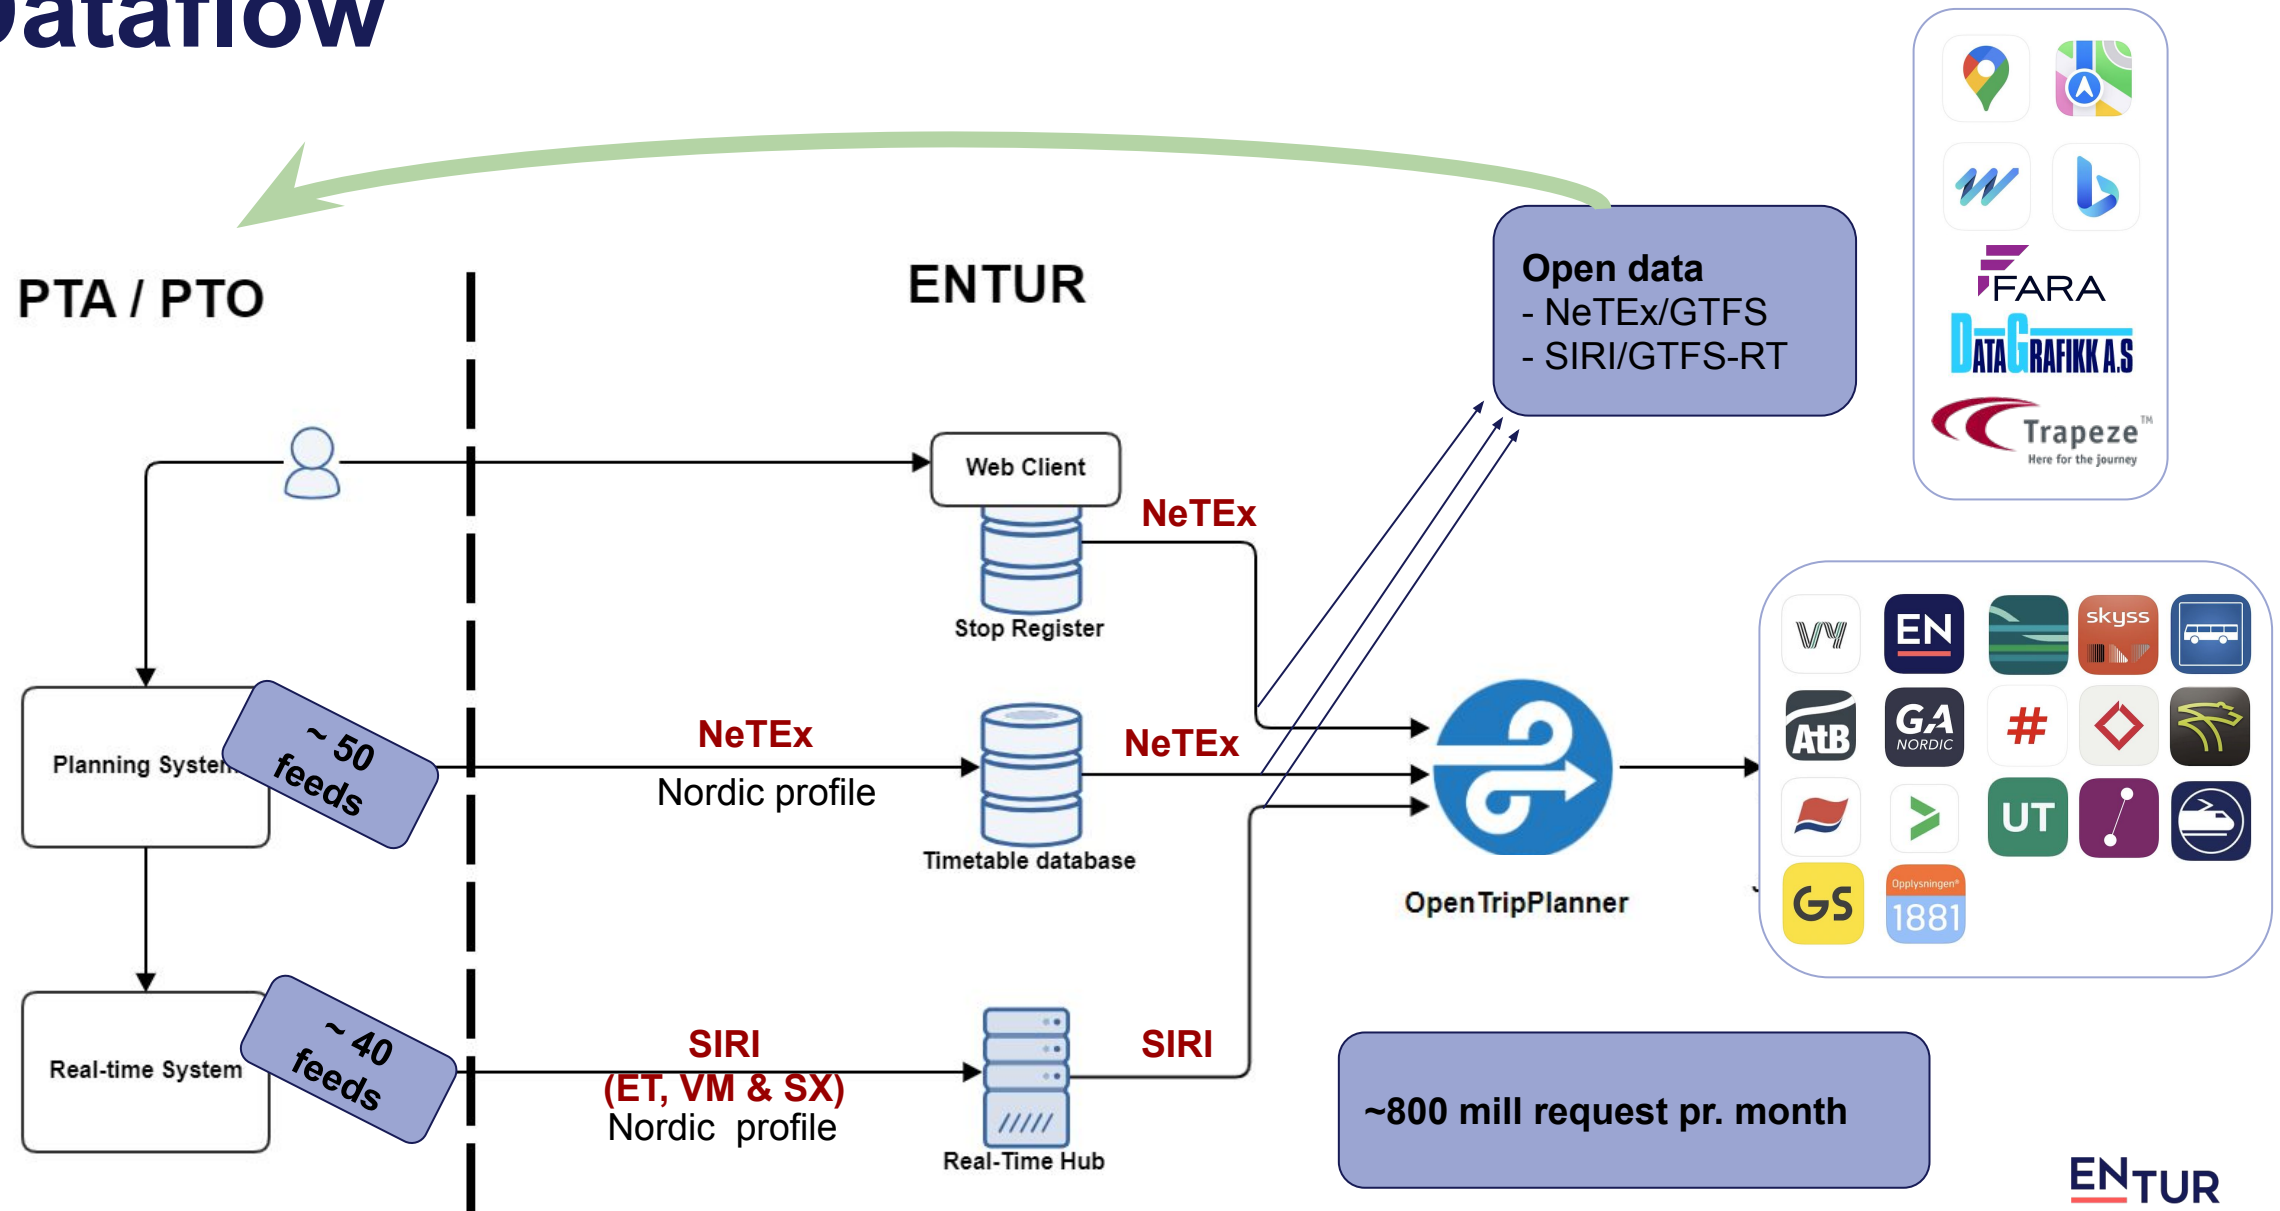

# ENTUR

- **Established 2016**
- **Owned by the Norwegian Ministry of Transport**
- **Responsible for:**
  - **Collection of all Public Transport data (NAP)**
  - **National services for Journey Planning**
  - **National services for ticketing for the whole PT sector**
    - **Mandatory for the rail sector**
    - **Optional for the rest of the PT sector**

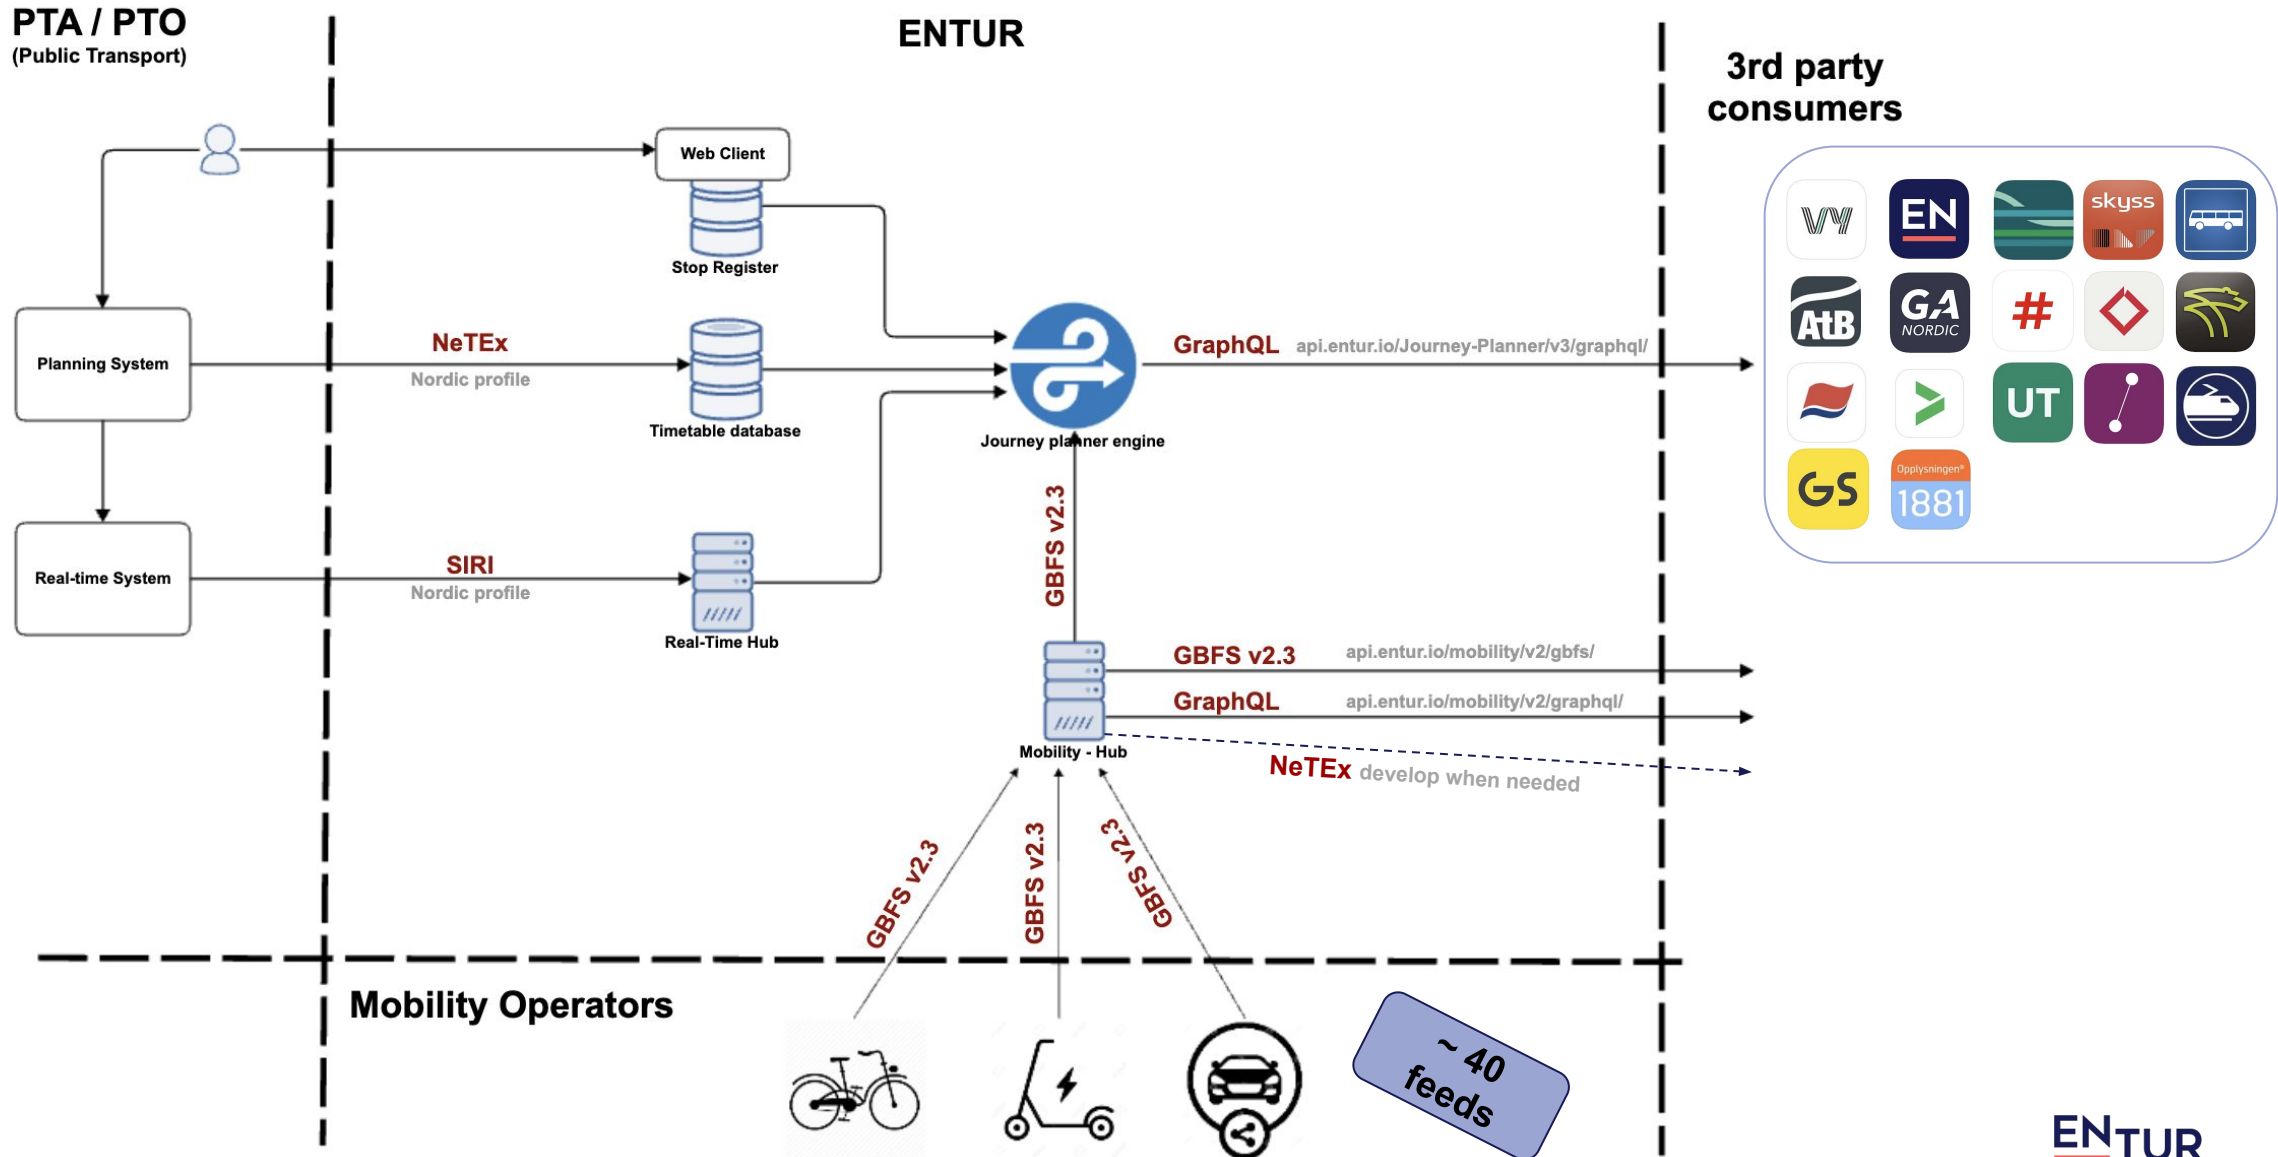

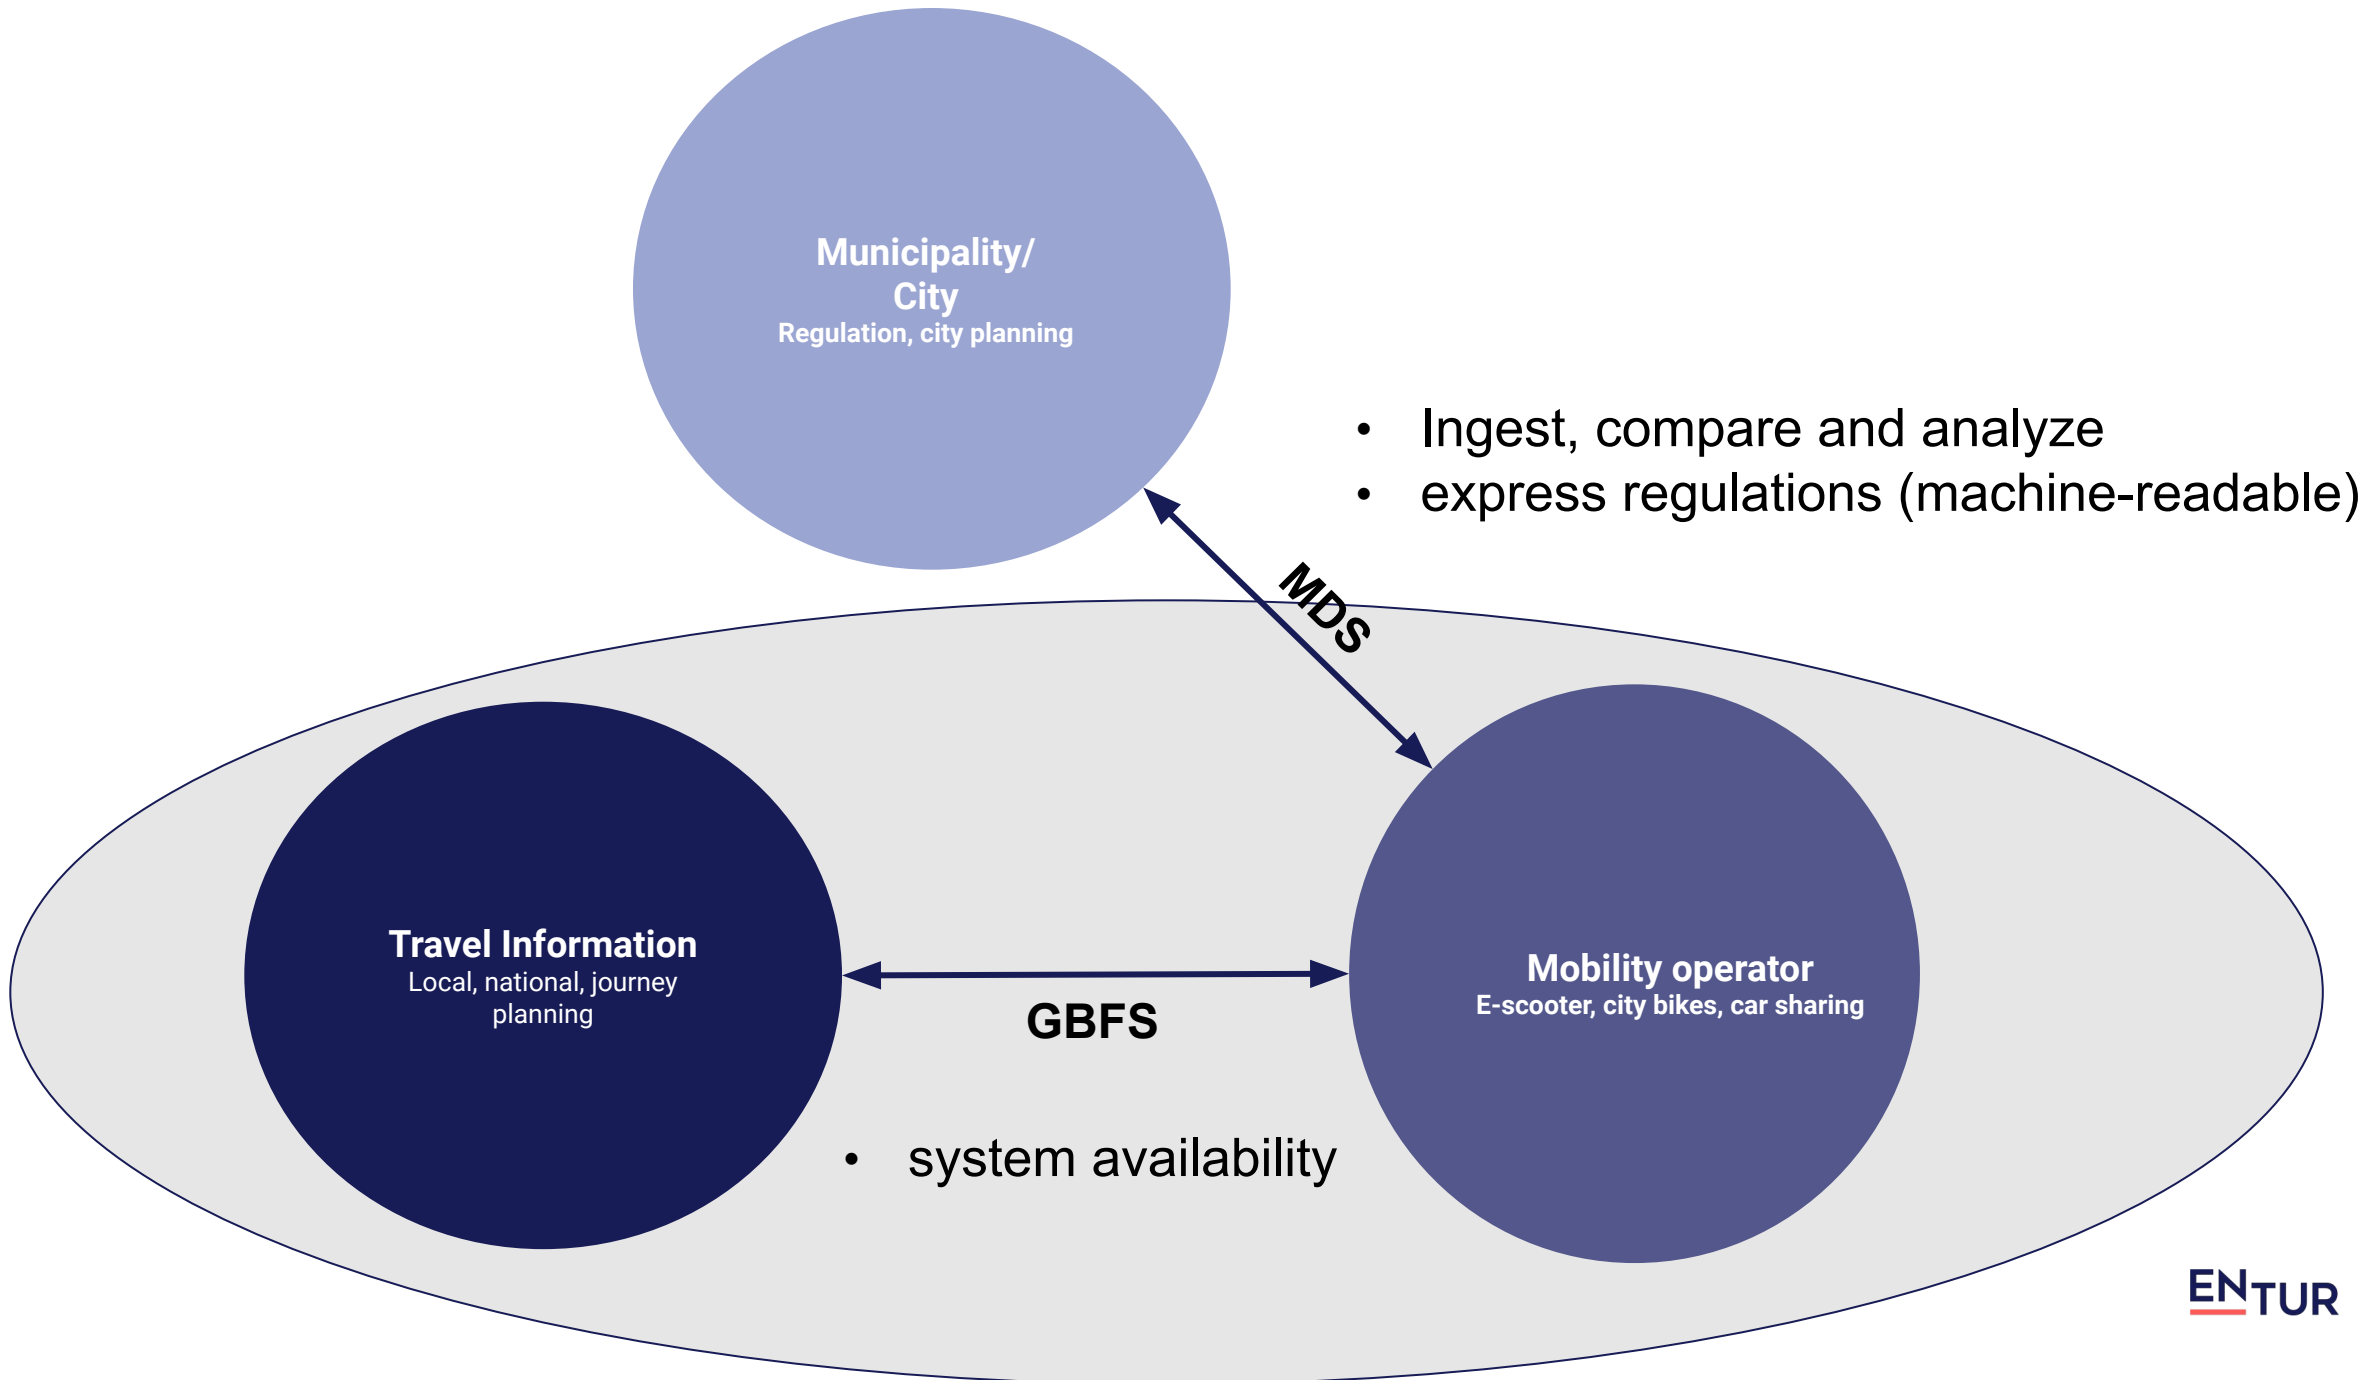

# Dataflow

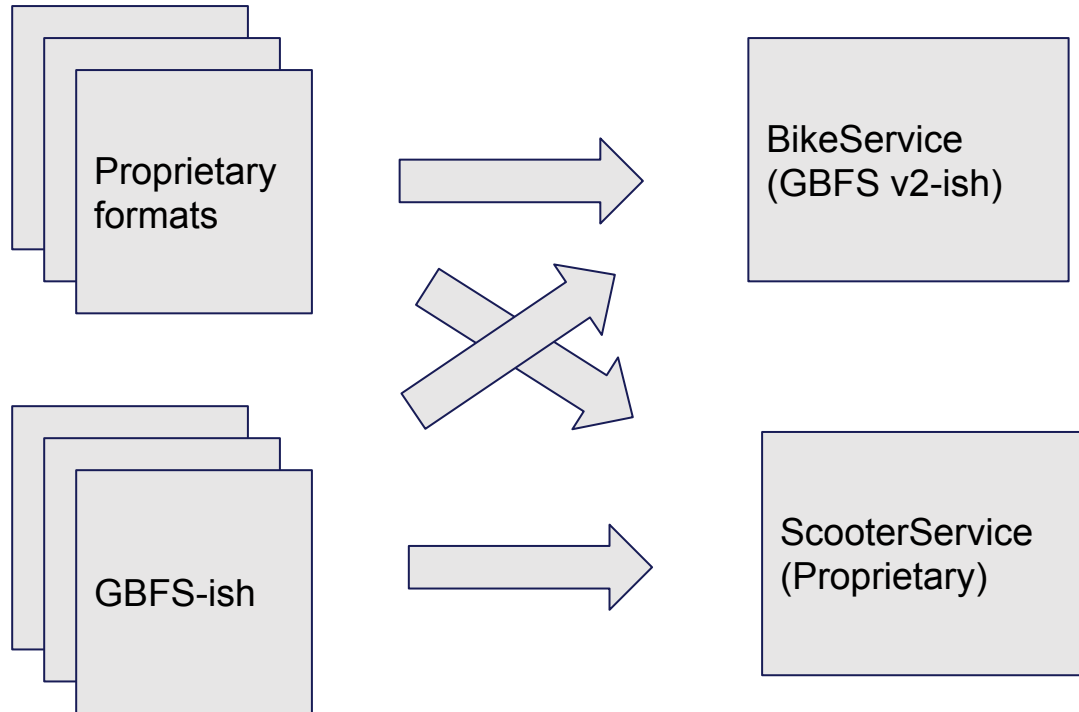

# *Mobility hub*

# National MobilityHub - collection of mobility data

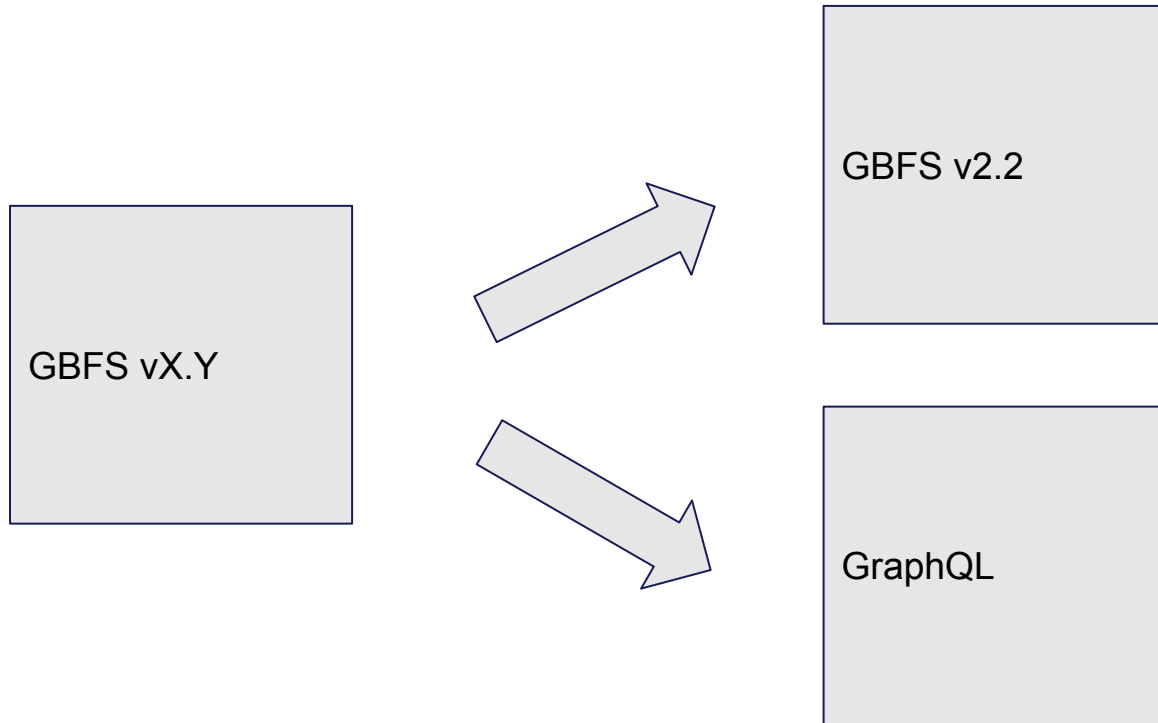

# mobility/v1

# mobility/v2

# Requirement #1: A solid model

- Uses MobilityData official JSON schema
- A generic solution
- Generates model for all GBFS versions
- Contribute improvements to upstream schema
- Let others benefit from the effort:
  - OpenTripPlanner uses this model

# Requirement #2: Easy validation

- A java library alternative to MobilityData's official validator
- Uses everit-org/json-schema to validate
- Fast and embeddable
- Frontend to consume results

# Requirement #2: Easy validation

### GBFS Validation reports

Mobility Data Collection - GBFS v2.2-v2.3 @ ENtur

Filter systems

#### Validation errors

station\_status

violationPath	schemaPath	params	message
#/data/stations/0/vehicle_types_available	#/properties/data/properties/stations/items/properties/vehicle_types_available		#/data/stations/0/vehicle_types_available: expected minimum item count: 1, found: 0
#/data/stations/1/vehicle_types_available	#/properties/data/properties/stations/items/properties/vehicle_types_available		#/data/stations/1/vehicle_types_available: expected minimum item count: 1, found: 0
#/data/stations/2/vehicle_types_available	#/properties/data/properties/stations/items/properties/vehicle_types_available		#/data/stations/2/vehicle_types_available: expected minimum item count: 1, found: 0

station\_information ● Exists 2.2 ● Valid

gbfs ● Exists 2.2 ● Valid

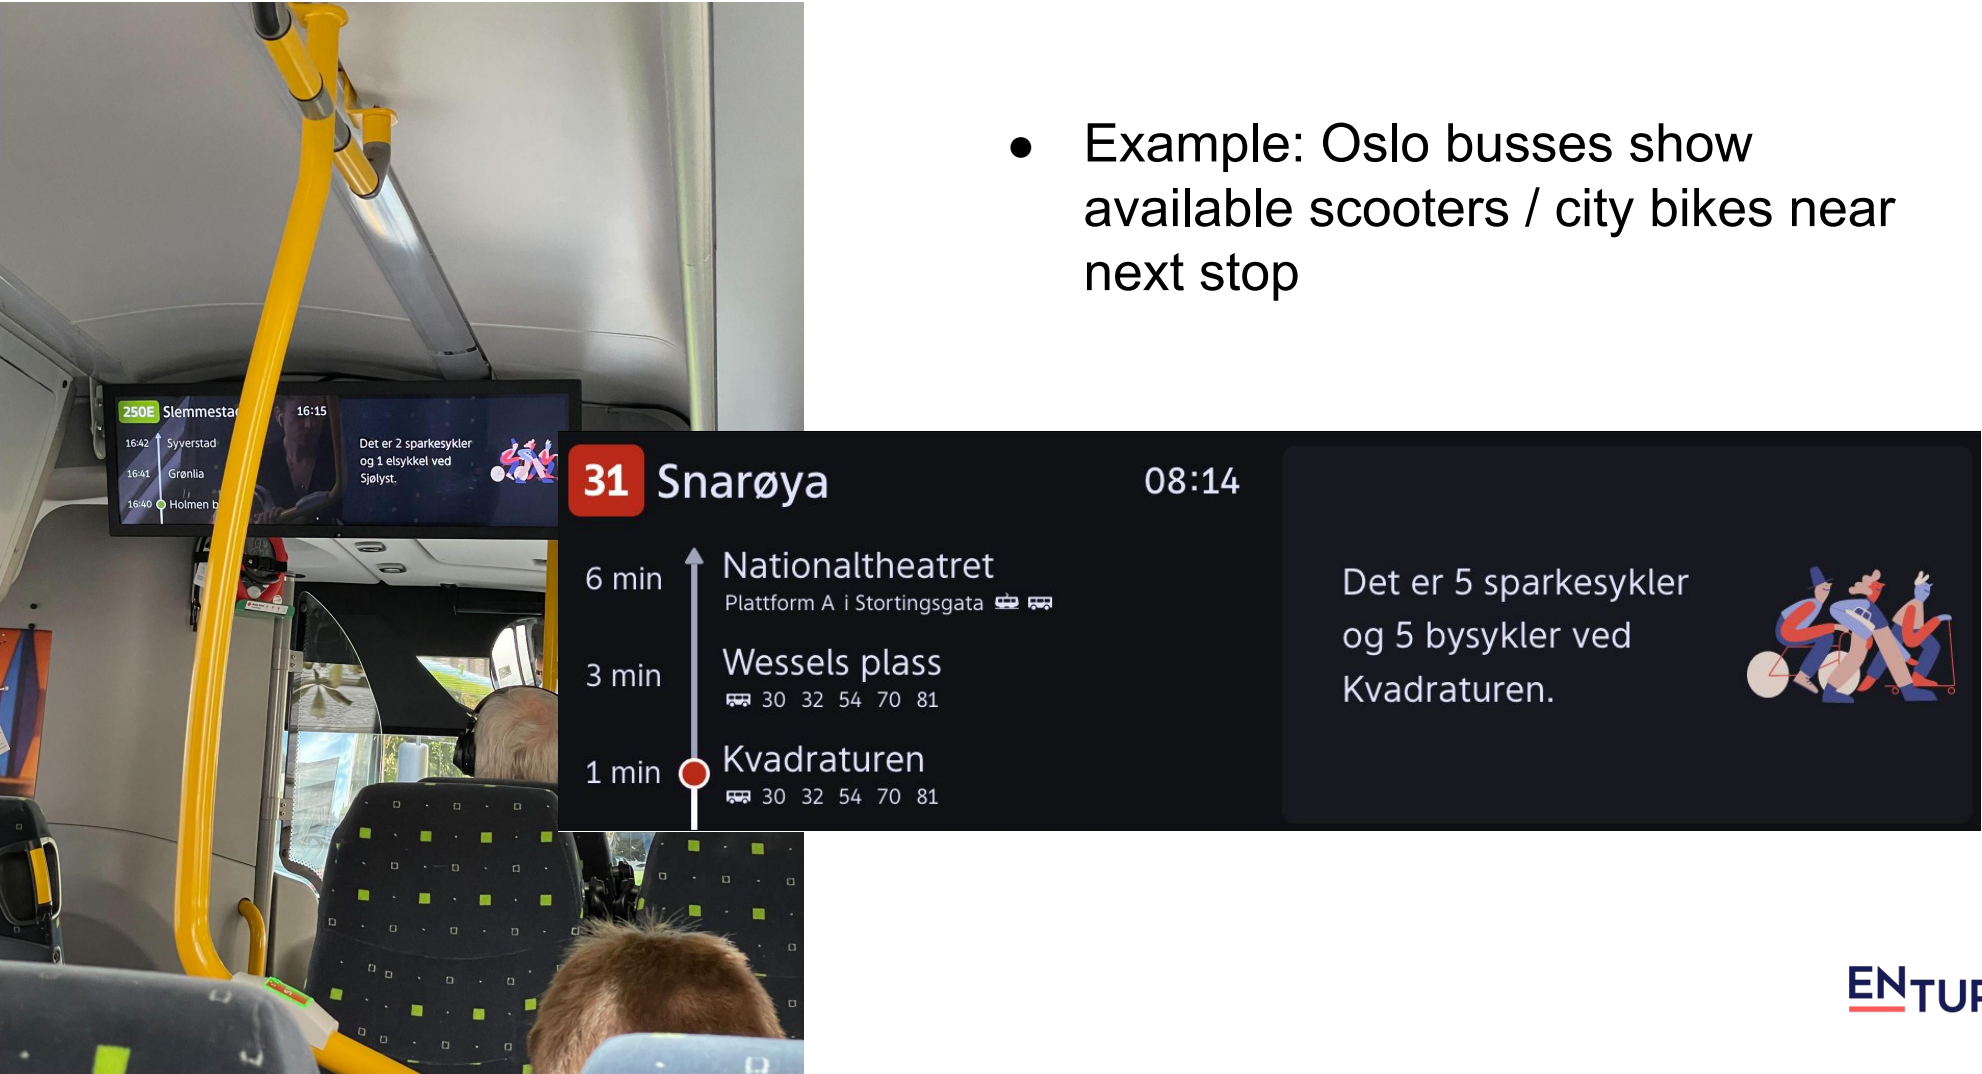

# Requirement #3: Share the data

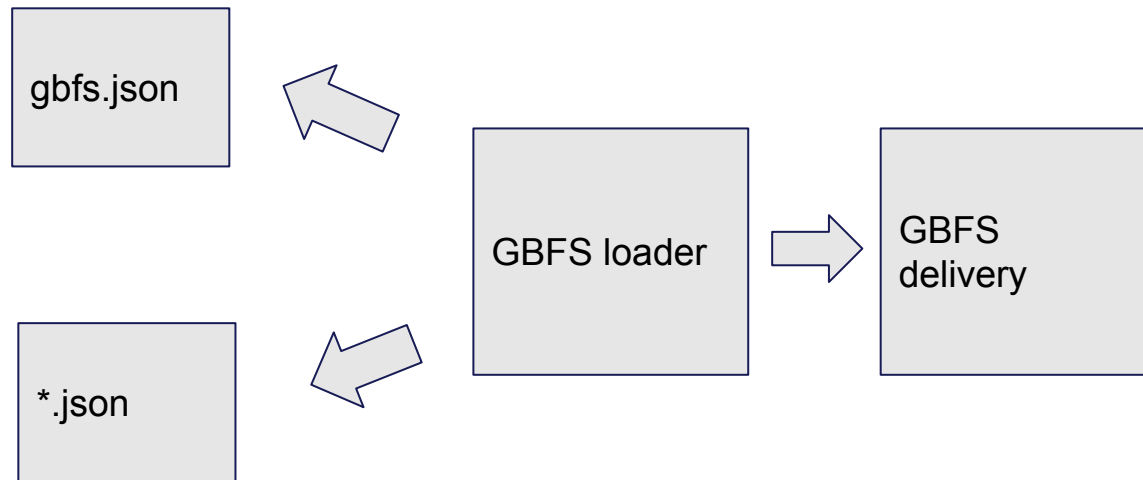

- Let others consume data freely in open formats
- Encourage innovation
- Efficient aggregation point for journey planners (see `manifest.json` in GBFS v3.0)

# Requirement #3: Share the data

- Example: Oslo busses show available scooters / city bikes near next stop

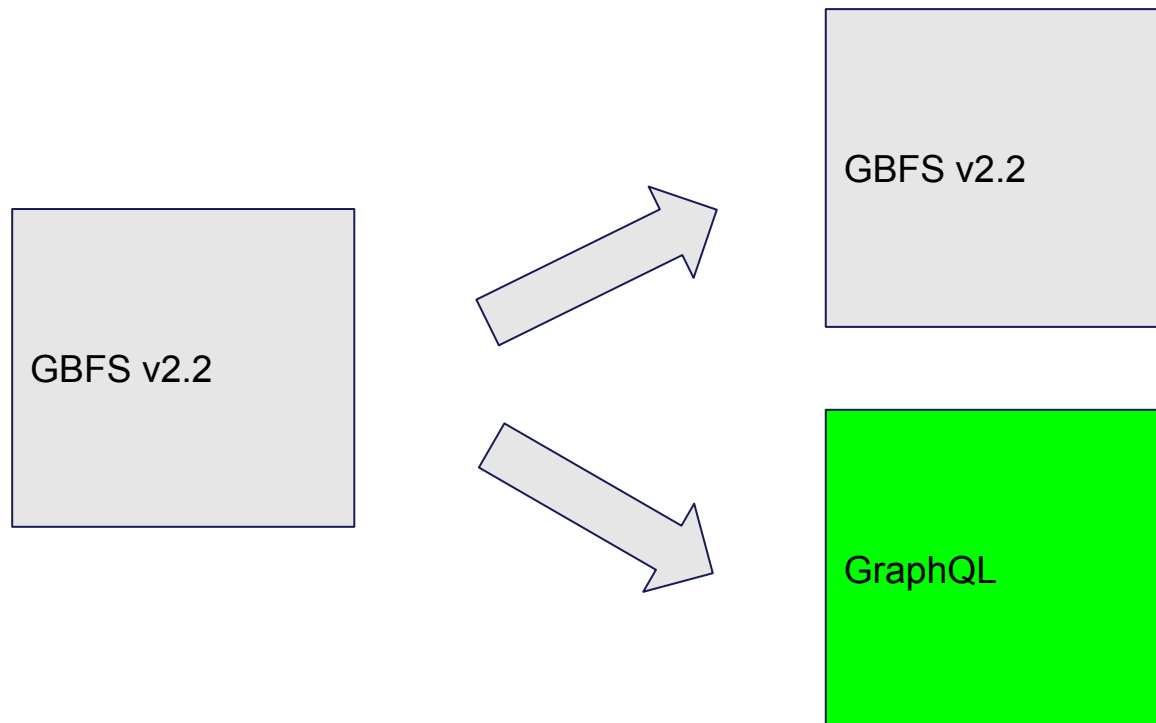

# Requirement #4: Offer e2e solution

- entur/gbfs-loader-java
- Library that wraps the loading of GBFS endpoints
- Easier to consume GBFS feeds
- Respects ttl (don't overfetch)
- Optional on-the-fly validation with gbfs-validator-java

# Requirement #5: Be nice to clients

- GraphQL API targeted at end-user applications
- Fast and light-weight
- Display nearby offers in a map

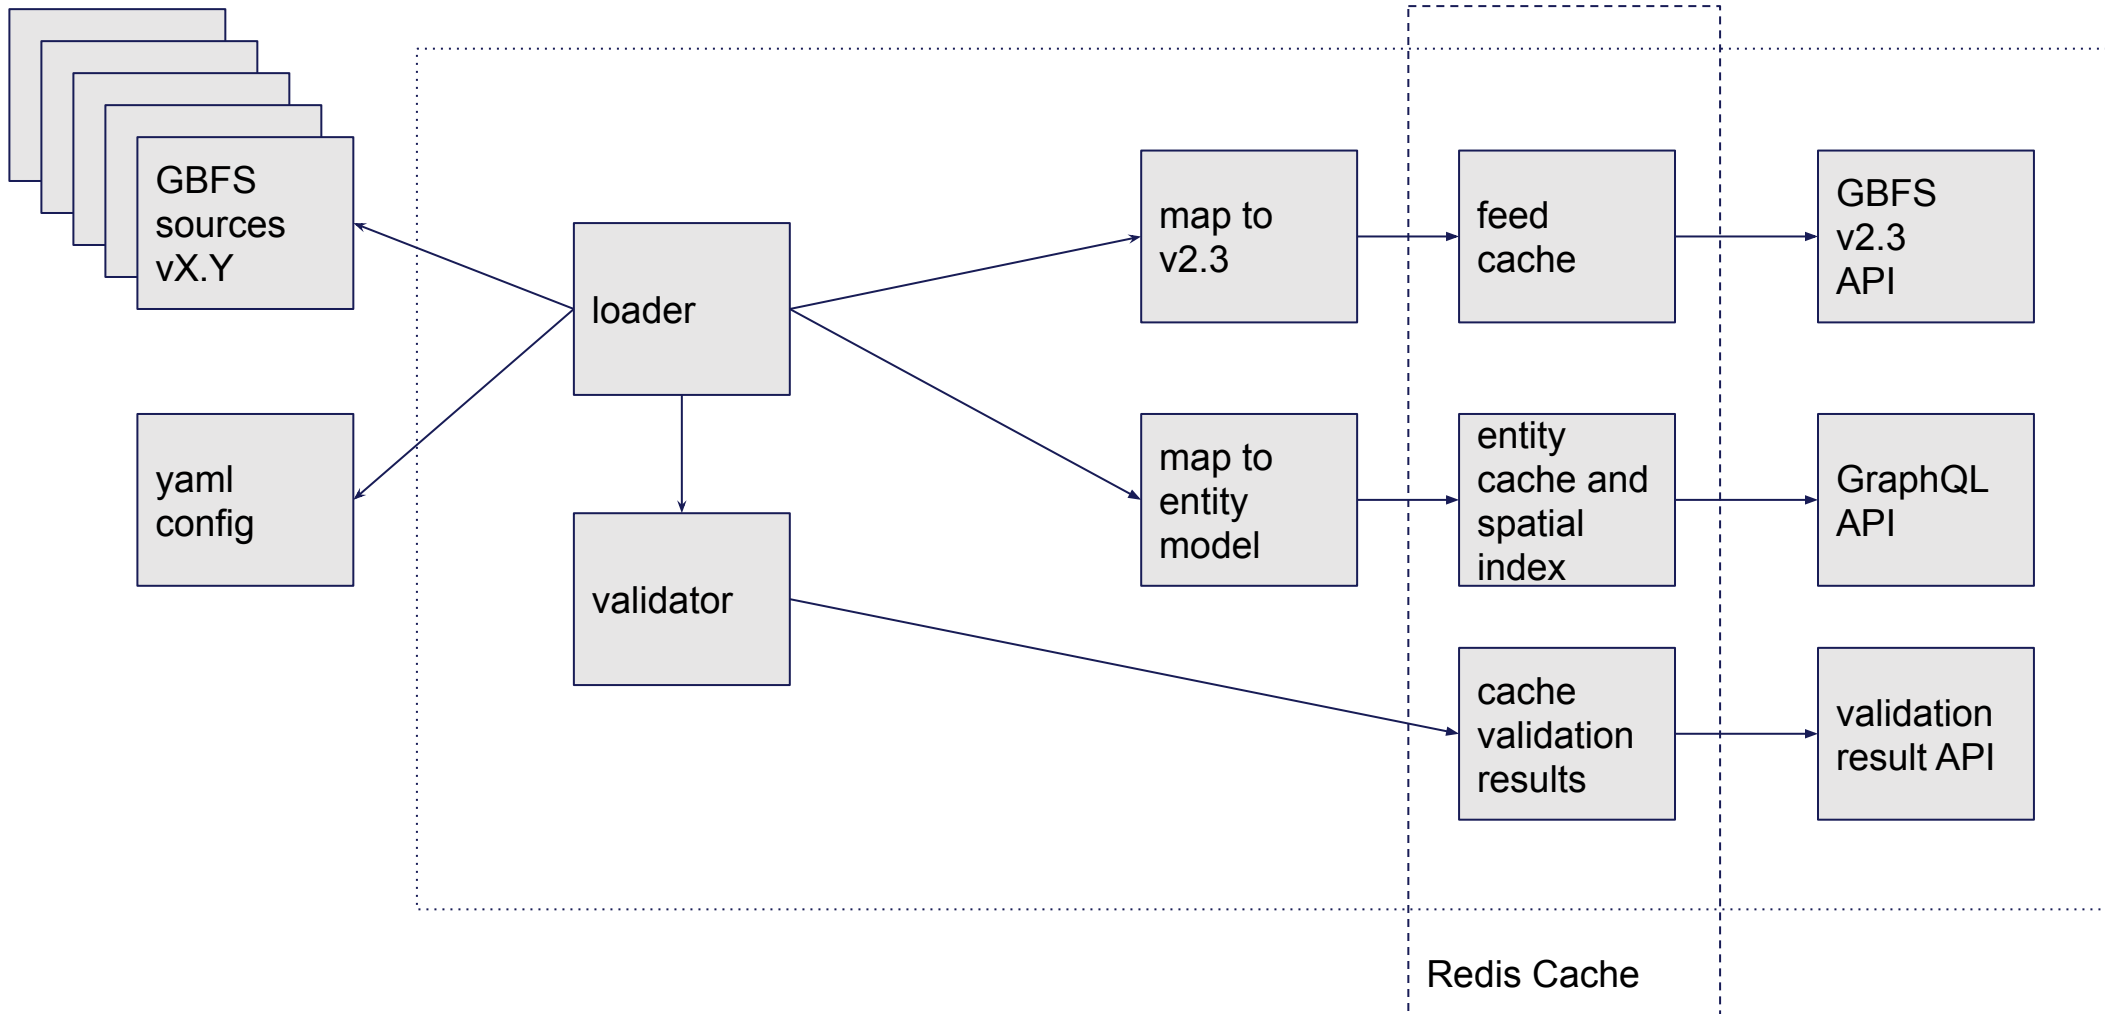

# Requirement #6: Offer visibility

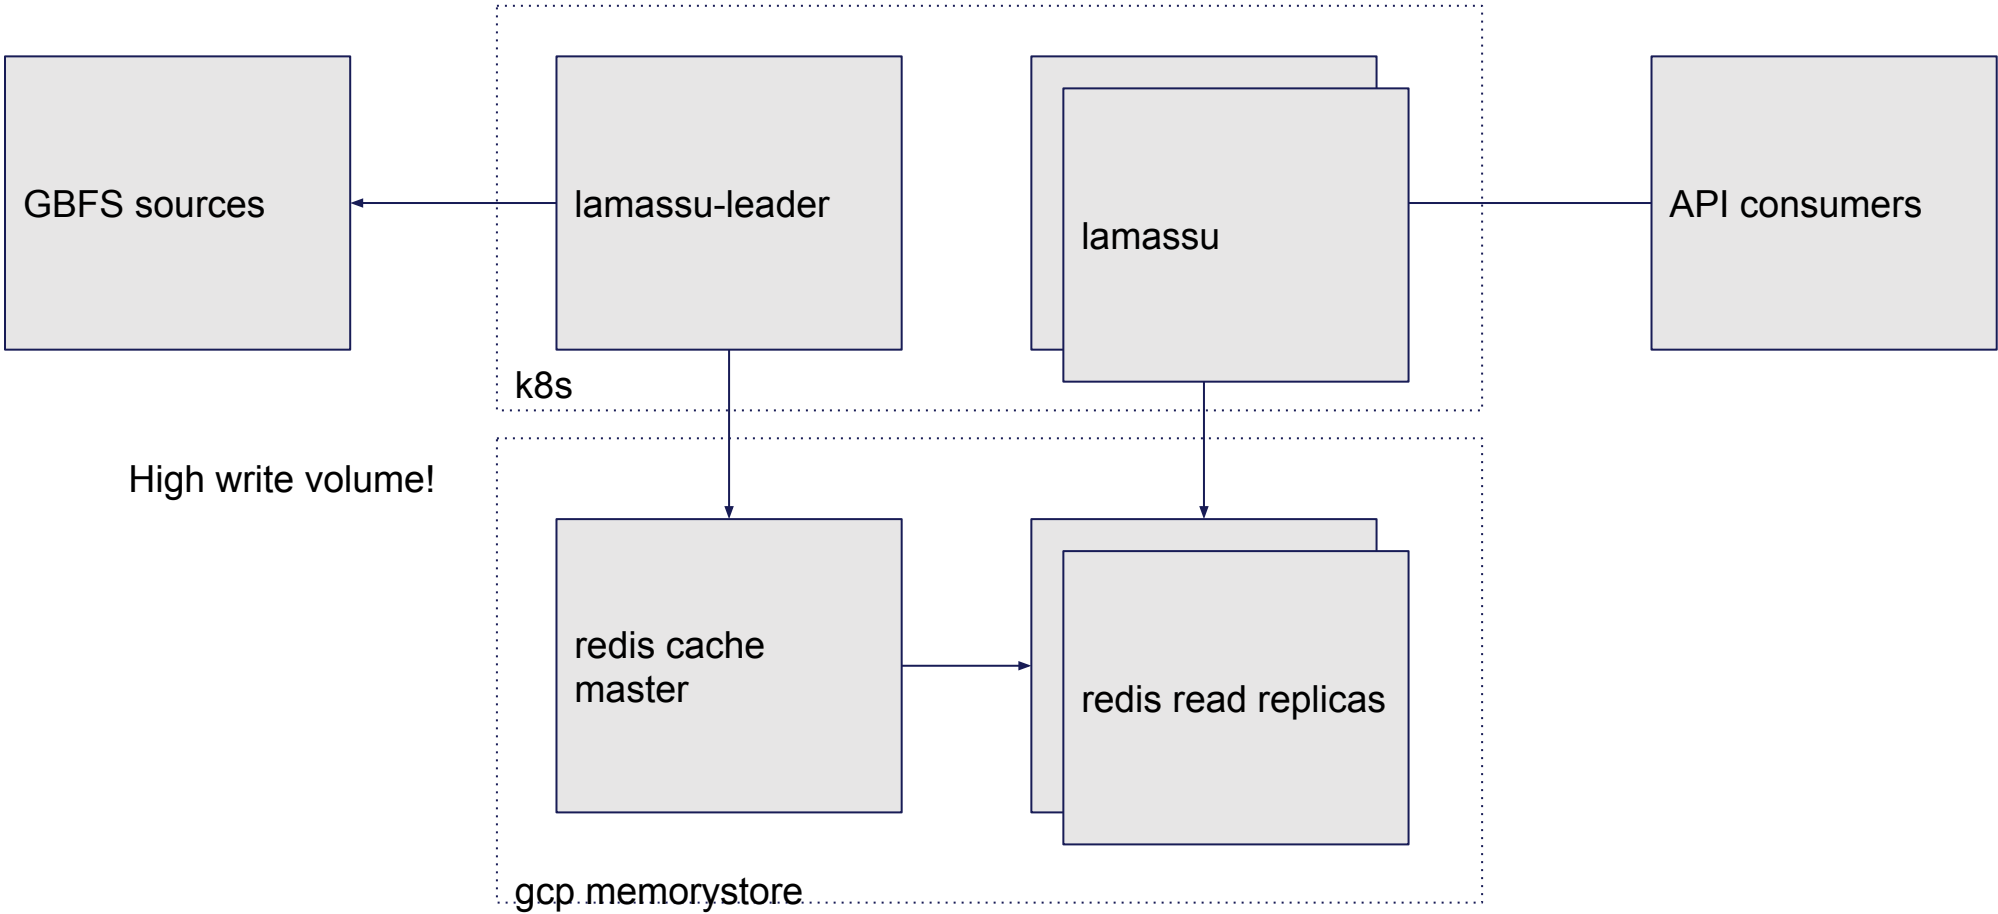

# Mobility hub features

- Easy to configure
- Fast and scalable
- Can read any GBFS feed (with some limitations) and serve it in the API
- Open source (please use it)
- Still in development - so has many quirks :)

# Lamassu architecture

# Lamassu architecture

# Stats

- Serving ~10k+ free floating vehicles and ~1k stations from 30-40 systems (varies)
- 250k+ upstream fetches per day
- GBFS API serves 10k-20k requests per minute
- GraphQL API serves 2k-4k requests per minute
- Redis cache size: ~500MB
- k8s resource usage 1-2 vCPU

### 1 Reise alternativ

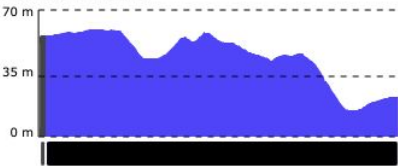

1 21:50   22:09

**Fra:** 21:50, 07.03.2023

➤ **GA** 50 m, 1 minutt til Bysykel  
YTI:Vehicle:5e4cc14555a04bc6611a61221869017880b8f0

➤ **SYKKEL** 2.8 km, 17 minutter til Destination

**Til:** 22:09, 07.03.2023

**Reise oversikt**

<b>Start</b>	21:50, 07.03.2023
<b>Reisetid</b>	19 minutter
<b>Kost</b>	5890
<b>Gangeavstand</b>	50 m
<b>Sykel distanse</b>	2.8 km
<b>Elevation Gained</b>	61 m
<b>Elevation Lost</b>	126 m
