The next page contains a Widget Annotation (Pushbutton) with an Additional Actions (`/AA`) dictionary to react on various trigger events:

`/PO` PageOpen

`/PC` PageClose

`/D` MouseDown

`/U` MouseUp

Scroll pages forth back in order to test PageOpen/PageClose events. Test the mouse events using the cursor.

All events should print a corrensponding message to the console. Note however, that only the mouse down and up events are reacted upon properly.

The reactangle contains the Widget Annotation (Push-button).
