

URL Shortener

1 Introduction and Goals

- Perform the necessary back-of-the-envelope calculations.
- Choose and justify the data storage scheme, the process for removing outdated links, the storage/update of statistics, and other necessary functional components.
- Choose and justify the server infrastructure, all necessary components, technologies, and libraries.
- Justify the reliability of the system.
- Choose and justify the release scheme and release tools.
- Formulate and justify the requirements for the development team.
- Choose and justify the environments and tools necessary for development.
- Choose and justify the hosting provider, estimate the costs for servers for all environments, including production.

1.1 Requirements Overview

- <https://www.systeminterview.com/q=chatsystem&c=loggedin&v=v3&l=long> is the original URL.
- Your service creates an alias with shorter length: <https://url-shortener.com/y7keocwj>. If you click the alias, it redirects you to the original URL.

1.2 Quality Goals

- **QG1:** 1 million new users per year, each user shortens an average of 100 links per year.
- **QG2:** The shortened links must be stored for 3 years.
- **QG3:** Redirection to the target address should occur in no more than 0.2 seconds.
- **QG4:** Click statistics must be tracked.
- **QG5:** System releases must occur seamlessly.
- **QG6:** The average link receives 10 visits per day.

1.3 Stakeholders

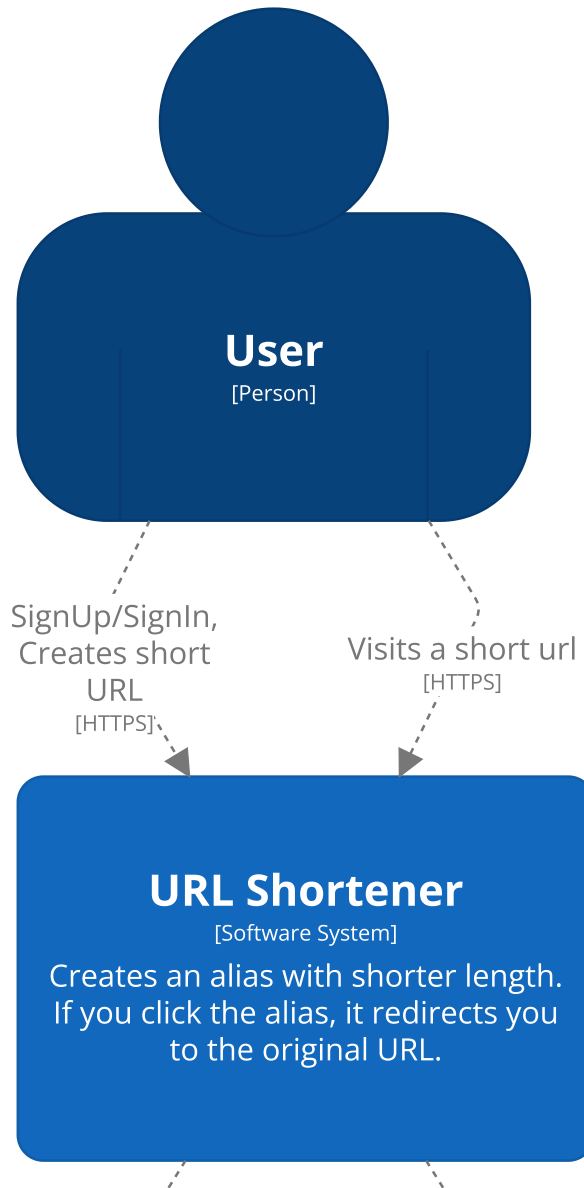

Role/Name	Contact	Expectations
<Role-1>	<Contact-1>	<Expectation-1>
<Role-2>	<Contact-2>	<Expectation-2>

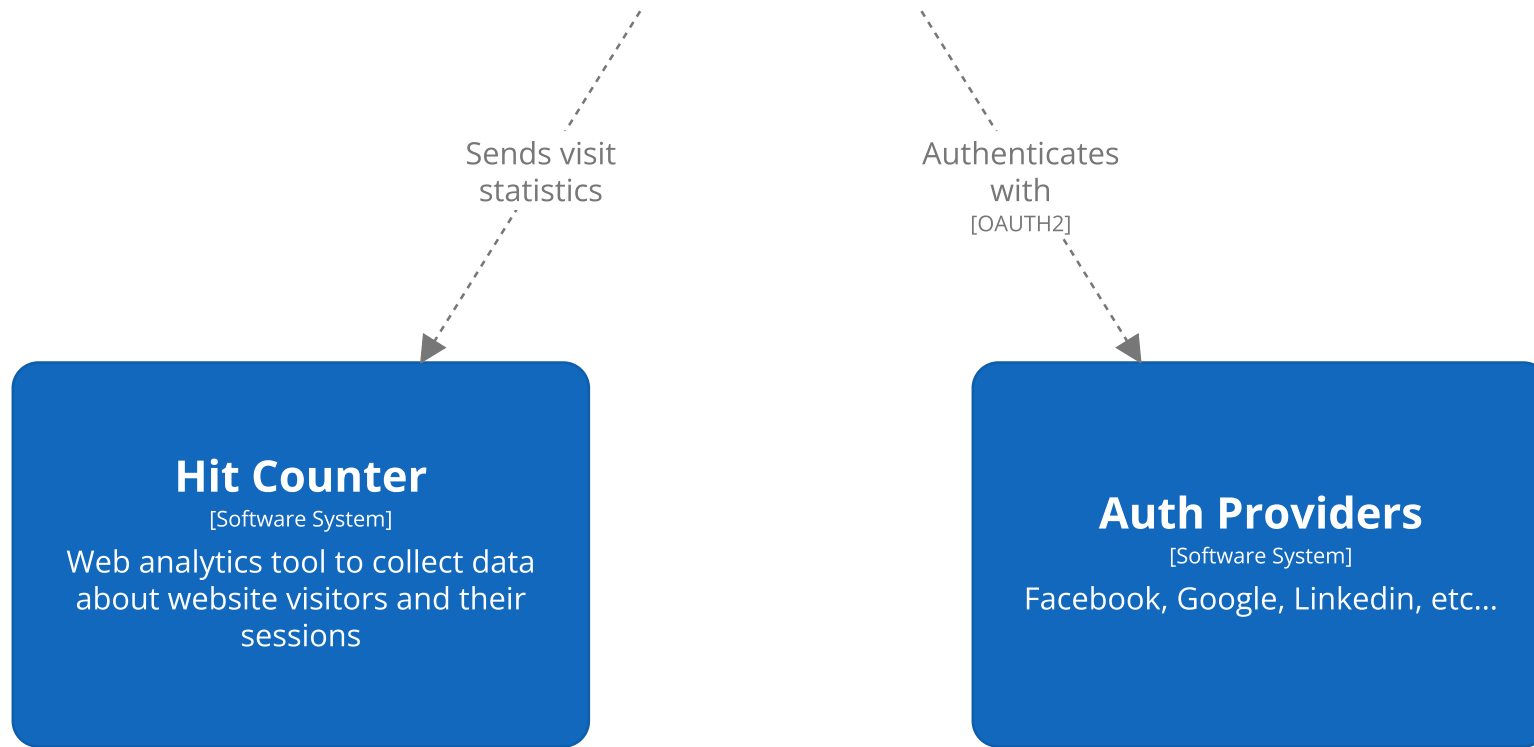

2 Architecture Constraints

- The failure of any two nodes should degrade system performance by no more than 0.1 seconds.

3 System Scope and Context

3.1 Business Context
