qbittorrent-api

Release 2024.12.72.dev10+gef6ae48

Russell Martin

Feb 11, 2025

CONTENTS

INTRODUCTION

Python client implementation for qBittorrent Web API.

Currently supports qBittorrent v5.0.3 (Web API v2.11.2) released on Dec 15, 2024.

1.1 Features

- The entire qBittorrent Web API is implemented.
- qBittorrent version checking for an endpoint's existence/features is automatically handled.
- If the authentication cookie expires, a new one is automatically requested in line with any API call.

1.2 Installation

- Install via pip from PyPI:

```
python -m pip install qbittorrent-api
```

- Install a specific release (e.g. v2024.3.60):

```
python -m pip install qbittorrent-api==2024.3.60
```

- Install direct from main:

```
pip install git+https://github.com/rmartin16/qbittorrent-api.git@main#egg=qbittorrent-api
```

- Enable WebUI in qBittorrent: Tools -> Preferences -> Web UI
- If the Web API will be exposed to the Internet, follow the recommendations.

1.3 Getting Started

```python
import qbittorrentapi

# instantiate a Client using the appropriate WebUI configuration
conn_info = dict(
    host="localhost",
    port=8080,
```

```python
    username="admin",
    password="adminadmin",
)
qbt_client = qbittorrentapi.Client(**conn_info)

# the Client will automatically acquire/maintain a logged-in state
# in line with any request. therefore, this is not strictly necessary;
# however, you may want to test the provided login credentials.
try:
    qbt_client.auth_log_in()
except qbittorrentapi.LoginFailed as e:
    print(e)

# if the Client will not be long-lived or many Clients may be created
# in a relatively short amount of time, be sure to log out:
qbt_client.auth_log_out()

# or use a context manager:
with qbittorrentapi.Client(**conn_info) as qbt_client:
    if qbt_client.torrents_add(urls="...") != "Ok.":
        raise Exception("Failed to add torrent.")

# display qBittorrent info
print(f"qBittorrent: {qbt_client.app.version}")
print(f"qBittorrent Web API: {qbt_client.app.web_api_version}")
for k, v in qbt_client.app.build_info.items():
    print(f"{k}: {v}")

# retrieve and show all torrents
for torrent in qbt_client.torrents_info():
    print(f"{torrent.hash[-6:]}: {torrent.name} ({torrent.state})")

# stop all torrents
qbt_client.torrents.stop.all()
```

1.4 Usage

First, the Web API endpoints are organized in to eight namespaces.

- Authentication (`auth`)

- Application (`app`)

- Log (`log`)

- Sync (`sync`)

- Transfer (`transfer`)

- Torrent Management (`torrents`)

- RSS (`rss`)

- Search (`search`)

Second, this client has two modes of interaction with the qBittorrent Web API.

Each Web API endpoint is implemented one-to-one as a method of the instantiated client.

```python
import qbittorrentapi
qbt_client = qbittorrentapi.Client(host='localhost:8080', username='admin', password=
↪'adminadmin')
qbt_client.app_version()
qbt_client.rss_rules()
qbt_client.torrents_info()
qbt_client.torrents_resume(torrent_hashes='...')
# and so on
```

However, a more robust interface to the endpoints is available via each namespace. This is intended to provide a more seamless and intuitive interface to the Web API.

```python
import qbittorrentapi
qbt_client = qbittorrentapi.Client(host='localhost:8080', username='admin', password=
↪'adminadmin')
# changing a preference
is_dht_enabled = qbt_client.app.preferences.dht
qbt_client.app.preferences = dict(dht=not is_dht_enabled)
# stopping all torrents
qbt_client.torrents.stop.all()
# retrieve different views of the log
qbt_client.log.main.warning()
qbt_client.log.main.normal()
```

Finally, some of the objects returned by the client support methods of their own. This is most pronounced for torrents themselves.

```python
import qbittorrentapi
qbt_client = qbittorrentapi.Client(host='localhost:8080', username='admin', password=
↪'adminadmin')

for torrent in qbt_client.torrents.info.active():
    torrent.set_location(location='/home/user/torrents/')
    torrent.reannounce()
    torrent.upload_limit = -1
```

1.4.1 Introduction

Python client implementation for qBittorrent Web API.

Currently supports qBittorrent v5.0.3 (Web API v2.11.2) released on Dec 15, 2024.

Features

- The entire qBittorrent Web API is implemented.

- qBittorrent version checking for an endpoint's existence/features is automatically handled.

- If the authentication cookie expires, a new one is automatically requested in line with any API call.

Installation

- Install via pip from PyPI:

```
python -m pip install qbittorrent-api
```

- Install a specific release (e.g. `v2024.3.60`):

```
python -m pip install qbittorrent-api==2024.3.60
```

- Install direct from `main`:

```
pip install git+https://github.com/rmartin16/qbittorrent-api.git@main#egg=qbittorrent-api
```

- Enable WebUI in qBittorrent: Tools -> Preferences -> Web UI
- If the Web API will be exposed to the Internet, follow the recommendations.

Getting Started

```python
import qbittorrentapi

# instantiate a Client using the appropriate WebUI configuration
conn_info = dict(
    host="localhost",
    port=8080,
    username="admin",
    password="adminadmin",
)
qbt_client = qbittorrentapi.Client(**conn_info)

# the Client will automatically acquire/maintain a logged-in state
# in line with any request. therefore, this is not strictly necessary;
# however, you may want to test the provided login credentials.
try:
    qbt_client.auth_log_in()
except qbittorrentapi.LoginFailed as e:
    print(e)

# if the Client will not be long-lived or many Clients may be created
# in a relatively short amount of time, be sure to log out:
qbt_client.auth_log_out()

# or use a context manager:
with qbittorrentapi.Client(**conn_info) as qbt_client:
    if qbt_client.torrents_add(urls="...") != "Ok.":
        raise Exception("Failed to add torrent.")

# display qBittorrent info
print(f"qBittorrent: {qbt_client.app.version}")
print(f"qBittorrent Web API: {qbt_client.app.web_api_version}")
for k, v in qbt_client.app.build_info.items():
    print(f"{k}: {v}")

# retrieve and show all torrents
```

qbittorrent-api, Release 2024.12.72.dev10+gef6ae48

```python
for torrent in qbt_client.torrents_info():
    print(f"{torrent.hash[-6:]}: {torrent.name} ({torrent.state})")

# stop all torrents
qbt_client.torrents.stop.all()
```

Usage

First, the Web API endpoints are organized in to eight namespaces.

- Authentication (`auth`)
- Application (`app`)
- Log (`log`)
- Sync (`sync`)
- Transfer (`transfer`)
- Torrent Management (`torrents`)
- RSS (`rss`)
- Search (`search`)

Second, this client has two modes of interaction with the qBittorrent Web API.

Each Web API endpoint is implemented one-to-one as a method of the instantiated client.

```python
import qbittorrentapi
qbt_client = qbittorrentapi.Client(host='localhost:8080', username='admin', password=
↪'adminadmin')
qbt_client.app_version()
qbt_client.rss_rules()
qbt_client.torrents_info()
qbt_client.torrents_resume(torrent_hashes='...')
# and so on
```

However, a more robust interface to the endpoints is available via each namespace. This is intended to provide a more seamless and intuitive interface to the Web API.

```python
import qbittorrentapi
qbt_client = qbittorrentapi.Client(host='localhost:8080', username='admin', password=
↪'adminadmin')
# changing a preference
is_dht_enabled = qbt_client.app.preferences.dht
qbt_client.app.preferences = dict(dht=not is_dht_enabled)
# stopping all torrents
qbt_client.torrents.stop.all()
# retrieve different views of the log
qbt_client.log.main.warning()
qbt_client.log.main.normal()
```

Finally, some of the objects returned by the client support methods of their own. This is most pronounced for torrents themselves.

```
import qbittorrentapi
qbt_client = qbittorrentapi.Client(host='localhost:8080', username='admin', password=
↪'adminadmin')

for torrent in qbt_client.torrents.info.active():
    torrent.set_location(location='/home/user/torrents/')
    torrent.reannounce()
    torrent.upload_limit = -1
```

1.4.2 Behavior & Configuration

Host, Username and Password

- The authentication credentials can be provided when instantiating *Client*:

```
qbt_client = Client(host="localhost:8080", username='...', password='...')
```

- The credentials can also be specified after *Client* is created but calling *auth_log_in()* is not strictly necessary to authenticate the client; this will happen automatically for any API request.

```
qbt_client.auth_log_in(username='...', password='...')
```

- Alternatively, the credentials can be specified in environment variables:
  - QBITTORRENTAPI_HOST
  - QBITTORRENTAPI_USERNAME
  - QBITTORRENTAPI_PASSWORD

qBittorrent Session Management

- Any time a connection is established with qBittorrent, it instantiates a session to manage authentication for all subsequent API requests.
- This client will transparently manage sessions by ensuring the client is always logged in in-line with any API request including requesting a new session upon expiration of an existing session.
- However, each new *Client* instantiation will create a new session in qBittorrent.
- Therefore, if many *Client* instances will be created be sure to call *auth_log_out* for each instance or use a context manager.
- Otherwise, qBittorrent may experience abnormally high memory usage.

```
with qbittorrentapi.Client(**conn_info) as qbt_client:
    if qbt_client.torrents_add(urls="...") != "Ok.":
        raise Exception("Failed to add torrent.")
```

Untrusted Web API Certificate

- qBittorrent allows you to configure HTTPS with an untrusted certificate; this commonly includes self-signed certificates.
- When using such a certificate, instantiate Client with VERIFY_WEBUI_CERTIFICATE=False or set environment variable QBITTORRENTAPI_DO_NOT_VERIFY_WEBUI_CERTIFICATE to a non-null value.
- Failure to do this for will cause connections to qBittorrent to fail.

- As a word of caution, doing this actually does turn off certificate verification. Therefore, for instance, potential man-in-the-middle attacks will not be detected and reported (since the error is suppressed). However, the connection will remain encrypted.

```
qbt_client = Client(..., VERIFY_WEBUI_CERTIFICATE=False}
```

Requests Configuration

- The Requests package is used to issue HTTP requests to qBittorrent to facilitate this API.

- Much of `Requests` configuration for making HTTP requests can be controlled with parameters passed along with the request payload.

- For instance, HTTP Basic Authorization credentials can be provided via `auth`, timeouts via `timeout`, or Cookies via `cookies`. See Requests documentation for full details.

- These parameters are exposed here in two ways; the examples below tell `Requests` to use a connect timeout of 3.1 seconds and a read timeout of 30 seconds.

- When you instantiate *Client*, you can specify the parameters to use in all HTTP requests to qBittorrent:

```
qbt_client = Client(..., REQUESTS_ARGS={'timeout': (3.1, 30)}
```

- Alternatively, parameters can be specified for individual requests:

```
qbt_client.torrents_info(..., requests_args={'timeout': (3.1, 30)})
```

- Additionally, configuration for the `HTTPAdapter` for the `Session` can be specified via the `HTTPADAPTER_ARGS` parameter for *Client*:

```
qbt_client = Client(..., HTTPADAPTER_ARGS={"pool_connections": 100, "pool_maxsize": 100}
```

Additional HTTP Headers

- For consistency, HTTP Headers can be specified using the method above; for backwards compatibility, the methods below are supported as well.

- Either way, these additional headers will be incorporated (using clobbering) into the rest of the headers to be sent.

- To send a custom HTTP header in all requests made from an instantiated client, declare them during instantiation:

```
qbt_client = Client(..., EXTRA_HEADERS={'X-My-Fav-Header': 'header value')
```

- Alternatively, you can send custom headers in individual requests:

```
qbt_client.torrents.add(..., headers={'X-My-Fav-Header': 'header value')
```

Unimplemented API Endpoints

- Since the qBittorrent Web API has evolved over time, some endpoints may not be available from the qBittorrent host.

- By default, if a request is made to endpoint that doesn't exist for the version of the qBittorrent host (e.g., the Search endpoints were introduced in Web API v2.1.1), there's a debug logger output and None is returned.

- To raise `NotImplementedError` instead, instantiate Client with:

```
qbt_client = Client(..., RAISE_NOTIMPLEMENTEDERROR_FOR_UNIMPLEMENTED_API_ENDPOINTS=True)
```

qBittorrent Version Checking

- It is also possible to either raise an Exception for qBittorrent hosts that are not "fully" supported or manually check for support.

- The most likely situation for this to occur is if the qBittorrent team publishes a new release but its changes have not been incorporated in to this client yet.

- Instantiate Client like below to raise *UnsupportedQbittorrentVersion* exception for versions not fully supported:

```
qbt_client = Client(..., RAISE_ERROR_FOR_UNSUPPORTED_QBITTORRENT_VERSIONS=True)
```

- Additionally, *Version* can be used for manual introspection of the versions.

```
Version.is_app_version_supported(qbt_client.app.version)
```

Disable Logging Debug Output

- Instantiate Client with `DISABLE_LOGGING_DEBUG_OUTPUT=True` or manually disable logging for the relevant packages:

```
logging.getLogger('qbittorrentapi').setLevel(logging.INFO)
logging.getLogger('requests').setLevel(logging.INFO)
logging.getLogger('urllib3').setLevel(logging.INFO)
```

1.4.3 Async Support

qbittorrent-api does not support Python's `async/await` functionality for asynchronous programming. However, many use-cases for this client operate within an existing asynchronous application. Therefore, in lieu of being able to await this client's API calls to qBittorrent, it is still possible to call them without blocking.

Each `asyncio` Event Loop provides a `ThreadPoolExecutor` that can run blocking code that could interfere with async applications. In Python 3.9, a simple interface was introduced in `asyncio` to run synchronous code in this thread pool.

```python
async def fetch_torrents() -> TorrentInfoList:
    return await asyncio.to_thread(qbt_client.torrents_info, category="uploaded")
```

In this example, you simply specify the method to call, `torrents_info`, as the first argument and follow it with the arguments for the method to run in the thread.

Below is a full example demonstrating this that can be run in the Python REPL:

```python
import asyncio
import qbittorrentapi

qbt_client = qbittorrentapi.Client()

async def fetch_qbt_info():
    return await asyncio.to_thread(qbt_client.app_build_info)

print(asyncio.run(fetch_qbt_info()))
```

1.4.4 Performance

By default, complex objects are returned from some endpoints. These objects allow for accessing the response's items as attributes and include methods for contextually relevant actions (such as start() and stop() for a torrent, for example).

This comes at the cost of performance, though. Generally, this cost isn't large; however, some endpoints, such as torrents_files(), may need to convert a large payload and the cost can be significant.

This client can be configured to always return only the simple JSON if desired. Simply set SIMPLE_RESPONSES=True when instantiating the client.

```
qbt_client = qbittorrentapi.Client(
    host='localhost:8080',
    username='admin',
    password='adminadmin',
    SIMPLE_RESPONSES=True,
)
```

Alternatively, SIMPLE_RESPONSES can be set to True to return the simple JSON only for an individual method call.

```
qbt_client.torrents.files(torrent_hash='...', SIMPLE_RESPONSES=True)
```

1.4.5 Exceptions

exception APIError

> Bases: Exception

> Base error for all exceptions from this Client.

exception UnsupportedQbittorrentVersion

> Bases: *APIError*

> Connected qBittorrent is not fully supported by this Client.

exception FileError

> Bases: OSError, *APIError*

> Base class for all exceptions for file handling.

exception TorrentFileError

> Bases: *FileError*

> Base class for all exceptions for torrent files.

exception TorrentFileNotFoundError

> Bases: *TorrentFileError*

> Specified torrent file does not appear to exist.

exception TorrentFilePermissionError

> Bases: *TorrentFileError*

> Permission was denied to read the specified torrent file.

exception APIConnectionError(*args*, ***kwargs*)

> Bases: RequestException, *APIError*

> Base class for all communications errors including HTTP errors.

exception **LoginFailed**(*args*, ***kwargs*)

> Bases: *APIConnectionError*
>
> This can technically be raised with any request since log in may be attempted for any request and could fail.

exception **HTTPError**(*args*, ***kwargs*)

> Bases: HTTPError, *APIConnectionError*
>
> Base error for all HTTP errors.
>
> All errors following a successful connection to qBittorrent are returned as HTTP statuses.
>
> **http_status_code:** int

exception **HTTP4XXError**(*args*, ***kwargs*)

> Bases: *HTTPError*
>
> Base error for all HTTP 4XX statuses.

exception **HTTP5XXError**(*args*, ***kwargs*)

> Bases: *HTTPError*
>
> Base error for all HTTP 5XX statuses.

exception **HTTP400Error**(*args*, ***kwargs*)

> Bases: *HTTP4XXError*
>
> HTTP 400 Status.
>
> **http_status_code:** int = **400**

exception **HTTP401Error**(*args*, ***kwargs*)

> Bases: *HTTP4XXError*
>
> HTTP 401 Status.
>
> **http_status_code:** int = **401**

exception **HTTP403Error**(*args*, ***kwargs*)

> Bases: *HTTP4XXError*
>
> HTTP 403 Status.
>
> **http_status_code:** int = **403**

exception **HTTP404Error**(*args*, ***kwargs*)

> Bases: *HTTP4XXError*
>
> HTTP 404 Status.
>
> **http_status_code:** int = **404**

exception **HTTP405Error**(*args*, ***kwargs*)

> Bases: *HTTP4XXError*
>
> HTTP 405 Status.
>
> **http_status_code:** int = **405**

exception **HTTP409Error**(*args*, ***kwargs*)

> Bases: *HTTP4XXError*
>
> HTTP 409 Status.

> > `http_status_code:` `int` `= 409`

exception **HTTP415Error**(*args*, ***kwargs*)

> > Bases: *HTTP4XXError*
>
> > HTTP 415 Status.
>
> > `http_status_code:` `int` `= 415`

exception **HTTP500Error**(*args*, ***kwargs*)

> > Bases: *HTTP5XXError*
>
> > HTTP 500 Status.
>
> > `http_status_code:` `int` `= 500`

exception **MissingRequiredParameters400Error**(*args*, ***kwargs*)

> > Bases: *HTTP400Error*
>
> > Endpoint call is missing one or more required parameters.

exception **InvalidRequest400Error**(*args*, ***kwargs*)

> > Bases: *HTTP400Error*
>
> > One or more endpoint arguments are malformed.

exception **Unauthorized401Error**(*args*, ***kwargs*)

> > Bases: *HTTP401Error*
>
> > Primarily reserved for XSS and host header issues.

exception **Forbidden403Error**(*args*, ***kwargs*)

> > Bases: *HTTP403Error*
>
> > Not logged in, IP has been banned, or calling an API method that isn't public.

exception **NotFound404Error**(*args*, ***kwargs*)

> > Bases: *HTTP404Error*
>
> > This should mean qBittorrent couldn't find a torrent for the torrent hash.

exception **MethodNotAllowed405Error**(*args*, ***kwargs*)

> > Bases: *HTTP405Error*
>
> > HTTP method is not supported for the API endpoint.

exception **Conflict409Error**(*args*, ***kwargs*)

> > Bases: *HTTP409Error*
>
> > Returned if arguments don't make sense specific to the endpoint.

exception **UnsupportedMediaType415Error**(*args*, ***kwargs*)

> > Bases: *HTTP415Error*
>
> > `torrents/add` endpoint will return this for invalid URL(s) or files.

exception **InternalServerError500Error**(*args*, ***kwargs*)

> > Bases: *HTTP500Error*
>
> > Returned if qBittorrent errors internally while processing the request.

1.4.6 API Reference

Application

class `AppAPIMixIn`(*host=None*, *port=None*, *username=None*, *password=None*, *EXTRA_HEADERS=None*,
REQUESTS_ARGS=None, *HTTPADAPTER_ARGS=None*,
VERIFY_WEBUI_CERTIFICATE=True, *FORCE_SCHEME_FROM_HOST=False*,
RAISE_NOTIMPLEMENTEDERROR_FOR_UNIMPLEMENTED_API_ENDPOINTS=False,
RAISE_ERROR_FOR_UNSUPPORTED_QBITTORRENT_VERSIONS=False,
VERBOSE_RESPONSE_LOGGING=False, *SIMPLE_RESPONSES=False*,
DISABLE_LOGGING_DEBUG_OUTPUT=False) → None

Bases: *AuthAPIMixIn*

Implementation of all `Application` API methods.

Usage

```
>>> from qbittorrentapi import Client
>>> client = Client(host="localhost:8080", username="admin", password=
→"adminadmin")
>>> client.app_version()
>>> client.app_preferences()
```

`app_build_info`(***kwargs*) → *BuildInfoDictionary*

qBittorrent build info.

This method was introduced with qBittorrent v4.2.0 (Web API v2.3).

Return type
BuildInfoDictionary

`app_cookies`(***kwargs*) → *CookieList*

Retrieve current cookies.

Return type
CookieList

`app_default_save_path`(***kwargs*) → str

The default path where torrents are saved.

Return type
str

`app_get_directory_content`(*directory_path=None*) → *DirectoryContentList*

The contents of a directory file path.

Raises
NotFound404Error – file path not found or not a directory

Parameters
directory_path (str | PathLike[AnyStr] | None) – file system path to directory

Return type
DirectoryContentList

`app_network_interface_address_list`(*interface_name=''*, ***kwargs*) → *NetworkInterfaceAddressList*

The addresses for a network interface; omit name for all addresses.

This method was introduced with qBittorrent v4.2.0 (Web API v2.3).

> **Parameters**
>> **interface_name** (`str`) – Name of interface to retrieve addresses for
>
> **Return type**
>> *NetworkInterfaceAddressList*

app_network_interface_list(***kwargs*) → *NetworkInterfaceList*

> The list of network interfaces on the host.
>
> This method was introduced with qBittorrent v4.2.0 (Web API v2.3).
>
>> **Return type**
>>> *NetworkInterfaceList*

app_preferences(***kwargs*) → *ApplicationPreferencesDictionary*

> Retrieve qBittorrent application preferences.
>
>> **Return type**
>>> *ApplicationPreferencesDictionary*

app_send_test_email() → None

> Sends a test email using the configured email address.
>
>> **Return type**
>>> None

app_set_cookies(*cookies=None*, ***kwargs*) → None

> Set cookies.

```
cookies = [
    {
        'domain': 'example.com',
        'path': '/example/path',
        'name': 'cookie name',
        'value': 'cookie value',
        'expirationDate': 1729366667,
    },
]
```

> **Parameters**
>> **cookies** (`CookieList` | Sequence[Mapping[str, str | int]] | None) – list of cookies to set
>
> **Return type**
>> None

app_set_preferences(*prefs=None*, ***kwargs*) → None

> Set one or more preferences in qBittorrent application.
>
> **Parameters**
>> **prefs** (`ApplicationPreferencesDictionary` | Mapping[str, Any] | None) – dictionary of preferences to set
>
> **Return type**
>> None

app_shutdown(***kwargs*) → None

> Shutdown qBittorrent.

> **Return type**
>> None

app_version(***kwargs*) → str

> qBittorrent application version.

>> **Return type**
>>> str

app_web_api_version(***kwargs*) → str

> qBittorrent Web API version.

>> **Return type**
>>> str

class Application(**args*, *client*, ***kwargs*)

> Allows interaction with `Application` API endpoints.

> **Usage**

```
>>> from qbittorrentapi import Client
>>> client = Client(host="localhost:8080", username="admin", password=
→"adminadmin")
>>> # these are all the same attributes that are available as named in
→the
>>> #  endpoints or the more pythonic names in Client (with or without
→'app_' prepended)
>>> webapiVersion = client.application.webapiVersion
>>> web_api_version = client.application.web_api_version
>>> app_web_api_version = client.application.web_api_version
>>> # access and set preferences as attributes
>>> is_dht_enabled = client.application.preferences.dht
>>> # supports sending a just subset of preferences to update
>>> client.application.preferences = dict(dht=(not is_dht_enabled))
>>> prefs = client.application.preferences
>>> prefs["web_ui_clickjacking_protection_enabled"] = True
>>> client.app.preferences = prefs
>>>
>>> client.application.shutdown()
```

> **property build_info:** *BuildInfoDictionary*
>> Implements *app_build_info()*.

> **property cookies:** *CookieList*
>> Implements *app_cookies()*.

> **property default_save_path:** str
>> Implements *app_default_save_path()*.

> **get_directory_content**(*directory_path=None*) → *DirectoryContentList*
>> Implements *app_get_directory_content()*.

>> **Return type**
>>> *DirectoryContentList*

> **network_interface_address_list**(*interface_name=''*, ***kwargs*) → *NetworkInterfaceAddressList*
>> Implements *app_network_interface_address_list()*.

> **Return type**
> *NetworkInterfaceAddressList*

property network_interface_list: *NetworkInterfaceList*
> Implements *app_network_interface_list()*.

property preferences: *ApplicationPreferencesDictionary*
> Implements *app_preferences()*.

send_test_email() → None
> Implements *app_send_test_email()*.

> > **Return type**
> > None

set_cookies(*cookies=None*, ***kwargs*) → None
> Implements *app_set_cookies()*.

> > **Return type**
> > None

set_preferences(*prefs=None*, ***kwargs*) → None
> Implements *app_set_preferences()*.

> > **Return type**
> > None

shutdown(***kwargs*) → None
> Implements *app_shutdown()*.

> > **Return type**
> > None

property version: *str*
> Implements *app_version()*.

property web_api_version: *str*
> Implements *app_web_api_version()*.

AttrDict (internal)

Copyright (c) 2013 Brendan Curran-Johnson

class AttrDict(**args*, ***kwargs*) → None

>   Bases: dict[str, V], *MutableAttr*[V]

>   A dict that implements MutableAttr.

class MutableAttr

>   Bases: *Attr*[str, V], MutableMapping[str, V], ABC

>   A `mixin` mapping class that allows for attribute-style access of values.

class Attr

>   Bases: Mapping[K, V], ABC

>   A `mixin` class for a mapping that allows for attribute-style access of values.

>   **A key may be used as an attribute if:**
>
>   - It is a string
>
>   - It matches `^[A-Za-z][A-Za-z0-9_]*$` (i.e., a public attribute)
>
>   - The key doesn't overlap with any class attributes (for `Attr`, those would be `get`, `items`, `keys`, `values`, `mro`, and `register`).

>   If a value which is accessed as an attribute is a Sequence-type (and is not a string/bytes), it will be converted to a _sequence_type with any mappings within it converted to Attrs.

>   **NOTE:**
>   >   This means that if _sequence_type is not None, then a sequence accessed as an attribute will be a different object than if accessed as an attribute than if it is accessed as an item.

Authentication

class AuthAPIMixIn(*host=None*, *port=None*, *username=None*, *password=None*, *EXTRA_HEADERS=None*, *REQUESTS_ARGS=None*, *HTTPADAPTER_ARGS=None*, *VERIFY_WEBUI_CERTIFICATE=True*, *FORCE_SCHEME_FROM_HOST=False*, *RAISE_NOTIMPLEMENTEDERROR_FOR_UNIMPLEMENTED_API_ENDPOINTS=False*, *RAISE_ERROR_FOR_UNSUPPORTED_QBITTORRENT_VERSIONS=False*, *VERBOSE_RESPONSE_LOGGING=False*, *SIMPLE_RESPONSES=False*, *DISABLE_LOGGING_DEBUG_OUTPUT=False*) → None

```

property is_logged_in: **bool**

> Implements *is_logged_in()*.

log_in(*username=None*, *password=None*, ***kwargs*) → None

> Implements *auth_log_in()*.
>
> > **Return type**
> > None

log_out(***kwargs*) → None

> Implements *auth_log_out()*.
>
> > **Return type**
> > None

Client

class Client(*host=''*, *port=None*, *username=None*, *password=None*, ***, *EXTRA_HEADERS=None*, *REQUESTS_ARGS=None*, *HTTPADAPTER_ARGS=None*, *VERIFY_WEBUI_CERTIFICATE=True*, *FORCE_SCHEME_FROM_HOST=False*, *RAISE_NOTIMPLEMENTEDERROR_FOR_UNIMPLEMENTED_API_ENDPOINTS=False*, *RAISE_ERROR_FOR_UNSUPPORTED_QBITTORRENT_VERSIONS=False*, *VERBOSE_RESPONSE_LOGGING=False*, *SIMPLE_RESPONSES=False*, *DISABLE_LOGGING_DEBUG_OUTPUT=False*)

Bases: *LogAPIMixIn*, *SyncAPIMixIn*, *TransferAPIMixIn*, *TorrentsAPIMixIn*, *TorrentCreatorAPIMixIn*, *RSSAPIMixIn*, *SearchAPIMixIn*

Initialize API for qBittorrent client.

Host must be specified. Username and password can be specified at login. A call to *auth_log_in()* is not explicitly required if username and password are provided during Client construction.

> **Usage**
>
> ```
> >>> from qbittorrentapi import Client
> >>> client = Client(host='localhost:8080', username='admin', password=
> ↪'adminadmin')
> >>> torrents = client.torrents_info()
> ```
>
> **Parameters**
>
> - **host** (*str*) – hostname for qBittorrent Web API, [http[s]://]hostname[:port][/path]
> - **port** (*str | int | None*) – port number for qBittorrent Web API (ignored if host contains a port)
> - **username** (*str | None*) – username for qBittorrent Web API
> - **password** (*str | None*) – password for qBittorrent Web API

- **SIMPLE_RESPONSES** (`bool`) – By default, complex objects are returned from some endpoints. These objects will allow for accessing responses' items as attributes and include methods for contextually relevant actions. This comes at the cost of performance. Generally, this cost isn't large; however, some endpoints, such as `torrents_files()` method, may need to convert a large payload. Set this to True to return the simple JSON back. Alternatively, set this to True only for an individual method call. For instance, when requesting the files for a torrent: `client.torrents_files(torrent_hash='...', SIMPLE_RESPONSES=True)`

- **VERIFY_WEBUI_CERTIFICATE** (`bool`) – Set to `False` to skip verify certificate for HTTPS connections; for instance, if the connection is using a self-signed certificate. Not setting this to `False` for self-signed certs will cause a *APIConnectionError* exception to be raised.

- **EXTRA_HEADERS** (`Mapping[str, str] | None`) – Dictionary of HTTP Headers to include in all requests made to qBittorrent.

- **REQUESTS_ARGS** (`Mapping[str, Any] | None`) – Dictionary of configuration for each HTTP request made by `requests.request`.

- **HTTPADAPTER_ARGS** (`Mapping[str, Any] | None`) – Dictionary of configuration for `HTTPAdapter`.

- **FORCE_SCHEME_FROM_HOST** (`bool`) – If a scheme (i.e. `http` or `https`) is specified in host, it will be used regardless of whether qBittorrent is configured for HTTP or HTTPS communication. Normally, this client will attempt to determine which scheme qBittorrent is actually listening on… but this can cause problems in rare cases. Defaults `False`.

- **RAISE_NOTIMPLEMENTEDERROR_FOR_UNIMPLEMENTED_API_ENDPOINTS** (`bool`) – Some endpoints may not be implemented in older versions of qBittorrent. Setting this to `True` will raise a `NotImplementedError` instead of just returning `None`.

- **RAISE_ERROR_FOR_UNSUPPORTED_QBITTORRENT_VERSIONS** (`bool`) – Raise *UnsupportedQbittorrentVersion* if the connected version of qBittorrent is not fully supported by this client. Defaults `False`.

- **DISABLE_LOGGING_DEBUG_OUTPUT** (`bool`) – Turn off debug output from logging for this package as well as `requests` & `urllib3`.

Definitions

APIKwargsT

Type `Any` for `kwargs` parameters for API methods.

class APINames(*value*, *names=<not given>*, **values*, *module=None*, *qualname=None*, *type=None*, *start=1*, *boundary=None*)

Bases: `str`, `Enum`

API namespaces for API endpoints.

e.g `torrents` in `http://localhost:8080/api/v2/torrents/addTrackers`

Application = 'app'

Authorization = 'auth'

EMPTY = ''

Log = 'log'

RSS = 'rss'

> > Search = 'search'
>
> > Sync = 'sync'
>
> > TorrentCreator = 'torrentcreator'
>
> > Torrents = 'torrents'
>
> > Transfer = 'transfer'

class **ClientCache**(**args*, *client*, ***kwargs*)

> Bases: Generic[*ClientT*]
>
> Caches the client.
>
> Subclass this for any object that needs access to the Client.

class **ClientT**

> Type for this API Client.
>
> alias of TypeVar('ClientT', bound=Request)

class **Dictionary**(*data=None*, ***kwargs*)

> Bases: *AttrDict*[V]
>
> Base definition of dictionary-like objects returned from qBittorrent.

FilesToSendT

> Type for Files input to API method.
>
> alias of Mapping[str, bytes | tuple[str, bytes]]

JsonValueT

> Type to define JSON.
>
> alias of None | int | str | bool | Sequence[JsonValueT] | Mapping[str, JsonValueT]

class **List**(*list_entries=None*, *entry_class=None*, ***kwargs*)

> Bases: UserList[*ListEntryT*]
>
> Base definition for list-like objects returned from qBittorrent.

class **ListEntry**(*data=None*, ***kwargs*)

> Bases: *Dictionary*[None | int | str | bool | Sequence[JsonValueT] | Mapping[str, JsonValueT]]
>
> Base definition for objects within a list returned from qBittorrent.

class **ListEntryT**

> Type for entry in List from API.
>
> alias of TypeVar('ListEntryT', bound=*ListEntry*)

ListInputT

> Type for List input to API method.
>
> alias of Iterable[Mapping[str, None | int | str | bool | Sequence[JsonValueT] | Mapping[str, JsonValueT]]]

class **TorrentState**(*value*, *names=<not given>*, **values*, *module=None*, *qualname=None*, *type=None*, *start=1*, *boundary=None*)

> Bases: str, Enum
>
> Torrent States as defined by qBittorrent.

Note: In qBittorrent v5.0.0:

- PAUSED_UPLOAD was renamed to STOPPED_UPLOAD

- PAUSED_DOWNLOAD was renamed to STOPPED_DOWNLOAD

Definitions:

class LogEntry(*data=None*, ***kwargs*)

> Bases: *ListEntry*

> Item in *LogMainList*

Request (internal)

class QbittorrentSession

> Bases: *Session*

> Wrapper to augment Requests Session.

> Requests doesn't allow Session to default certain configuration globally. This gets around that by setting defaults for each request.

> **request**(*method*, *url*, ***kwargs*) → Response

>> Constructs a *Request*, prepares it and sends it. Returns `Response` object.

>> **Parameters**

>>> - **method** (*str*) – method for the new *Request* object.
>>>
>>> - **url** (*str*) – URL for the new *Request* object.
>>>
>>> - **params** – (optional) Dictionary or bytes to be sent in the query string for the *Request*.
>>>
>>> - **data** – (optional) Dictionary, list of tuples, bytes, or file-like object to send in the body of the *Request*.
>>>
>>> - **json** – (optional) json to send in the body of the *Request*.
>>>
>>> - **headers** – (optional) Dictionary of HTTP Headers to send with the *Request*.
>>>
>>> - **cookies** – (optional) Dict or CookieJar object to send with the *Request*.
>>>
>>> - **files** – (optional) Dictionary of `'filename':  file-like-objects` for multipart encoding upload.
>>>
>>> - **auth** – (optional) Auth tuple or callable to enable Basic/Digest/Custom HTTP Auth.
>>>
>>> - **timeout** (*float or tuple*) – (optional) How long to wait for the server to send data before giving up, as a float, or a (connect timeout, read timeout) tuple.
>>>
>>> - **allow_redirects** (*bool*) – (optional) Set to True by default.
>>>
>>> - **proxies** – (optional) Dictionary mapping protocol or protocol and hostname to the URL of the proxy.
>>>
>>> - **hooks** – (optional) Dictionary mapping hook name to one event or list of events, event must be callable.

- **stream** – (optional) whether to immediately download the response content. Defaults to `False`.

- **verify** – (optional) Either a boolean, in which case it controls whether we verify the server's TLS certificate, or a string, in which case it must be a path to a CA bundle to use. Defaults to `True`. When set to `False`, requests will accept any TLS certificate presented by the server, and will ignore hostname mismatches and/or expired certificates, which will make your application vulnerable to man-in-the-middle (MitM) attacks. Setting verify to `False` may be useful during local development or testing.

- **cert** – (optional) if String, path to ssl client cert file (.pem). If Tuple, ('cert', 'key') pair.

Return type
> *Response*

class QbittorrentURL(*client*)

> Bases: `object`

> Management for the qBittorrent Web API URL.

> **build**(*api_namespace*, *api_method*, *headers=None*, *requests_kwargs=None*, *base_path='api/v2'*) → str
>
> > Create a fully qualified URL for the API endpoint.
> >
> > **Parameters**
> >
> > - **api_namespace** (`APINames` | `str`) – the namespace for the API endpoint (e.g. `torrents`)
> >
> > - **api_method** (`str`) – the specific method for the API endpoint (e.g. `info`)
> >
> > - **base_path** (`str`) – base path for URL (e.g. `api/v2`)
> >
> > - **headers** (`Mapping[str, str]` | `None`) – HTTP headers for request
> >
> > - **requests_kwargs** (`Mapping[str, Any]` | `None`) – kwargs for any calls to Requests
> >
> > **Return type**
> > > `str`
> >
> > **Returns**
> > > fully qualified URL string for endpoint

> **build_base_url**(*headers*, *requests_kwargs*) → str
>
> > Determine the Base URL for the Web API endpoints.
> >
> > A URL is only actually built here if it's the first time here or the context was re-initialized. Otherwise, the most recently built URL is used.
> >
> > If the user doesn't provide a scheme for the URL, it will try HTTP first and fall back to HTTPS if that doesn't work. While this is probably backwards, qBittorrent or an intervening proxy can simply redirect to HTTPS and that'll be respected.
> >
> > Additionally, if users want to augment the path to the API endpoints, any path provided here will be preserved in the returned Base URL and prefixed to all subsequent API calls.
> >
> > **Parameters**
> >
> > - **headers** (`Mapping[str, str]`) – HTTP headers for request
> >
> > - **requests_kwargs** (`Mapping[str, Any]`) – arguments from user for HTTP `HEAD` request
> >
> > **Return type**
> > > `str`
> >
> > **Returns**
> > > base URL as a `string` for Web API endpoint

detect_scheme(*base_url*, *default_scheme*, *alt_scheme*, *headers*, *requests_kwargs*) → str

Determine if the URL endpoint is using HTTP or HTTPS.

> **Parameters**
>
> > - **base_url** (ParseResult) – urllib ParseResult URL object
> >
> > - **default_scheme** (str) – default scheme to use for URL
> >
> > - **alt_scheme** (str) – alternative scheme to use for URL if default doesn't work
> >
> > - **headers** (Mapping[str, str]) – HTTP headers for request
> >
> > - **requests_kwargs** (Mapping[str, Any]) – kwargs for calls to Requests
>
> **Return type**
> > str
>
> **Returns**
> > scheme (i.e. HTTP or HTTPS)

class Request(*host=None*, *port=None*, *username=None*, *password=None*, *EXTRA_HEADERS=None*, *REQUESTS_ARGS=None*, *HTTPADAPTER_ARGS=None*, *VERIFY_WEBUI_CERTIFICATE=True*, *FORCE_SCHEME_FROM_HOST=False*, *RAISE_NOTIMPLEMENTEDERROR_FOR_UNIMPLEMENTED_API_ENDPOINTS=False*, *RAISE_ERROR_FOR_UNSUPPORTED_QBITTORRENT_VERSIONS=False*, *VERBOSE_RESPONSE_LOGGING=False*, *SIMPLE_RESPONSES=False*, *DISABLE_LOGGING_DEBUG_OUTPUT=False*) → None

Bases: object

Facilitates HTTP requests to qBittorrent's Web API.

_auth_request(*http_method*, *api_namespace*, *api_method*, *_retry_backoff_factor=0.3*, *requests_args=None*, *requests_params=None*, *headers=None*, *params=None*, *data=None*, *files=None*, *response_class=<class 'requests.models.Response'>*, *version_introduced=''*, *version_removed=''*, ***kwargs*) → Any

Wraps API call with re-authorization if first attempt is not authorized.

> **Return type**
> > Any

_cast(*response*, *response_class*, ***response_kwargs*) → Any

Returns the API response casted to the requested class.

> **Parameters**
>
> > - **response** (Response) – requests Response from API
> >
> > - **response_class** (type) – class to return response as; if none, response is returned
> >
> > - **response_kwargs** (Any) – request-specific configuration for response
>
> **Return type**
> > Any

static _format_payload(*http_method*, *params=None*, *data=None*, *files=None*, ***kwargs*) → tuple[dict[str, Any], dict[str, Any], Mapping[str, bytes | tuple[str, bytes]]]

Determine `data`, `params`, and `files` for the Requests call.

> **Parameters**
>
> > - **http_method** (str) – `get` or `post`
> >
> > - **params** (Mapping[str, Any] | None) – key value pairs to send with GET calls

- **data** (`Mapping[str, Any] | None`) – key value pairs to send with POST calls

- **files** (`Mapping[str, bytes | tuple[str, bytes]] | None`) – dictionary of files to send with request

> **Return type**
> `tuple[dict[str, Any], dict[str, Any], Mapping[str, bytes | tuple[str, bytes]]]`

_get(*_name*, *_method*, *requests_args=None*, *requests_params=None*, *headers=None*, *params=None*, *data=None*, *files=None*, *response_class=<class 'requests.models.Response'>*, *version_introduced=''*, *version_removed=''*, ***kwargs*) → `Any`

Send GET request.

> **Parameters**
>
> - **api_namespace** – the namespace for the API endpoint (e.g. `APINames` or `torrents`)
>
> - **api_method** – the name for the API endpoint (e.g. `add`)
>
> - **kwargs** (`Any`) – see `_request()`
>
> **Return type**
> `Any`
>
> **Returns**
> Requests `Response`

_get_cast(*_name*, *_method*, *response_class*, *requests_args=None*, *requests_params=None*, *headers=None*, *params=None*, *data=None*, *files=None*, *version_introduced=''*, *version_removed=''*, ***kwargs*) → ResponseT

Send GET request with casted response.

> **Parameters**
>
> - **api_namespace** – the namespace for the API endpoint (e.g. `APINames` or `torrents`)
>
> - **api_method** – the name for the API endpoint (e.g. `add`)
>
> - **kwargs** (`Any`) – see `_request()`
>
> **Return type**
> `TypeVar`(ResponseT)

static _handle_error_responses(*data*, *params*, *response*) → `None`

Raise proper exception if qBittorrent returns Error HTTP Status.

> **Return type**
> `None`

_initialize_context() → `None`

Initialize and reset communications context with qBittorrent.

This is necessary on startup or when the authorization cookie needs to be replaced... perhaps because it expired, qBittorrent was restarted, significant settings changes, etc.

> **Return type**
> `None`

_initialize_settings(*EXTRA_HEADERS=None*, *REQUESTS_ARGS=None*, *HTTPADAPTER_ARGS=None*, *VERIFY_WEBUI_CERTIFICATE=True*, *FORCE_SCHEME_FROM_HOST=False*, *RAISE_NOTIMPLEMENTEDERROR_FOR_UNIMPLEMENTED_API_ENDPOINTS=False*, *RAISE_ERROR_FOR_UNSUPPORTED_QBITTORRENT_VERSIONS=False*, *VERBOSE_RESPONSE_LOGGING=False*, *SIMPLE_RESPONSES=False*, *DISABLE_LOGGING_DEBUG_OUTPUT=False*) → None

    Initialize lesser used configuration.

> **Return type**
> None

_is_endpoint_supported_for_version(*endpoint*, *version_introduced*, *version_removed*) → bool

    Prevent using an API methods that doesn't exist in this version of qBittorrent.

> **Parameters**
>
> - **endpoint** (str) – name of the removed endpoint, e.g. torrents/ban_peers
> - **version_introduced** (str) – the Web API version the endpoint was introduced
> - **version_removed** (str) – the Web API version the endpoint was removed
>
> **Return type**
> bool

classmethod **_list2string**(*input_list*, *delimiter='|'*) → str | T

    Convert entries in a list to a concatenated string.

> **Parameters**
>
> - **input_list** (TypeVar(T)) – list to convert
> - **delimiter** (str) – delimiter for concatenation
>
> **Return type**
> str | TypeVar(T)

_post(*_name*, *_method*, *requests_args=None*, *requests_params=None*, *headers=None*, *params=None*, *data=None*, *files=None*, *response_class=<class 'requests.models.Response'>*, *version_introduced=''*, *version_removed=''*, ***kwargs*) → Any

    Send POST request.

> **Parameters**
>
> - **api_namespace** – the namespace for the API endpoint (e.g. *APINames* or torrents)
> - **api_method** – the name for the API endpoint (e.g. add)
> - **kwargs** (Any) – see *_request()*
>
> **Return type**
> Any

_post_cast(*_name*, *_method*, *response_class*, *requests_args=None*, *requests_params=None*, *headers=None*, *params=None*, *data=None*, *files=None*, *version_introduced=''*, *version_removed=''*, ***kwargs*) → ResponseT

    Send POST request with casted response.

> **Parameters**
>
> - **api_namespace** – the namespace for the API endpoint (e.g. *APINames* or torrents)
> - **api_method** – the name for the API endpoint (e.g. add)

- **kwargs** (Any) – see *_request()*

> **Return type**
> TypeVar(ResponseT)

_request(*http_method*, *api_namespace*, *api_method*, *requests_args=None*, *requests_params=None*, *headers=None*, *params=None*, *data=None*, *files=None*, *response_class=<class 'requests.models.Response'>*, ***kwargs*) → Any

Meat and potatoes of sending requests to qBittorrent.

> **Parameters**
>
> - **http_method** (str) – get or post
> - **api_namespace** (*APINames* | str) – the namespace for the API endpoint (e.g. *APINames* or torrents)
> - **api_method** (str) – the name for the API endpoint (e.g. add)
> - **requests_args** (Mapping[str, Any] | None) – default location for Requests kwargs
> - **requests_params** (Mapping[str, Any] | None) – alternative location for Requests kwargs
> - **headers** (Mapping[str, str] | None) – HTTP headers to send with the request
> - **params** (Mapping[str, Any] | None) – key/value pairs to send with a GET request
> - **data** (Mapping[str, Any] | None) – key/value pairs to send with a POST request
> - **files** (Mapping[str, bytes | tuple[str, bytes]] | None) – files to be sent with the request
> - **response_class** (type) – class to use to cast the API response
> - **kwargs** (Any) – arbitrary keyword arguments to send with the request
>
> **Return type**
> Any

_request_manager(*http_method*, *api_namespace*, *api_method*, *_retries=1*, *_retry_backoff_factor=0.3*, *requests_args=None*, *requests_params=None*, *headers=None*, *params=None*, *data=None*, *files=None*, *response_class=<class 'requests.models.Response'>*, *version_introduced=''*, *version_removed=''*, ***kwargs*) → Any

Wrapper to manage request retries and severe exceptions.

This should retry at least once to account for the Web API switching from HTTP to HTTPS. During the second attempt, the URL is rebuilt using HTTP or HTTPS as appropriate.

> **Return type**
> Any

property _session: *QbittorrentSession*

Create or return existing HTTP session.

_trigger_session_initialization() → None

Effectively resets the HTTP session by removing the reference to it.

During the next request, a new session will be created.

> **Return type**
> None

_verbose_logging(*url*, *data*, *params*, *requests_kwargs*, *response*) → None

>Log verbose information about request; can be useful during development.

>>**Return type**
>>None

RSS

class **RSSAPIMixIn**(*host=None*, *port=None*, *username=None*, *password=None*, *EXTRA_HEADERS=None*, *REQUESTS_ARGS=None*, *HTTPADAPTER_ARGS=None*, *VERIFY_WEBUI_CERTIFICATE=True*, *FORCE_SCHEME_FROM_HOST=False*, *RAISE_NOTIMPLEMENTEDERROR_FOR_UNIMPLEMENTED_API_ENDPOINTS=False*, *RAISE_ERROR_FOR_UNSUPPORTED_QBITTORRENT_VERSIONS=False*, *VERBOSE_RESPONSE_LOGGING=False*, *SIMPLE_RESPONSES=False*, *DISABLE_LOGGING_DEBUG_OUTPUT=False*) → None

>Bases: *AppAPIMixIn*

>Implementation of all RSS API methods.

>>**Usage**

>>```
>>>>> from qbittorrentapi import Client
>>>>> client = Client(host="localhost:8080", username="admin", password=
>>↪"adminadmin")
>>>>> rss_rules = client.rss_rules()
>>>>> client.rss_set_rule(rule_name="...", rule_def={...})
>>```

rss_add_feed(*url=None*, *item_path=''*, ***kwargs*) → None

>Add new RSS feed. Folders in path must already exist.

>>**Raises**
>>*Conflict409Error* –

>>**Parameters**

>>- **url** (str | None) – URL of RSS feed (e.g. https://distrowatch.com/news/torrents.xml)

>>- **item_path** (str) – Name and/or path for new feed; defaults to the URL. (e.g. Folder\ Subfolder\FeedName)

>>**Return type**
>>None

rss_add_folder(*folder_path=None*, ***kwargs*) → None

>Add an RSS folder. Any intermediate folders in path must already exist.

>>**Raises**
>>*Conflict409Error* –

>>**Parameters**
>>**folder_path** (str | None) – path to new folder (e.g. Linux\ISOs)

>>**Return type**
>>None

rss_items(*include_feed_data=None*, ***kwargs*) → *RSSitemsDictionary*

>Retrieve RSS items and optionally feed data.

>>**Parameters**
>>**include_feed_data** (bool | None) – True or false to include feed data

> **Return type**
> *RSSitemsDictionary*

rss_mark_as_read(*item_path=None*, *article_id=None*, ***kwargs*) → None

Mark RSS article as read. If article ID is not provider, the entire feed is marked as read.

This method was introduced with qBittorrent v4.2.5 (Web API v2.5.1).

> **Raises**
> *NotFound404Error* –
>
> **Parameters**
> - **item_path** (`str | None`) – path to item to be refreshed (e.g. `Folder\Subfolder\ItemName`)
> - **article_id** (`str | int | None`) – article ID from *rss_items()*
>
> **Return type**
> None

rss_matching_articles(*rule_name=None*, ***kwargs*) → *RSSitemsDictionary*

Fetch all articles matching a rule.

This method was introduced with qBittorrent v4.2.5 (Web API v2.5.1).

> **Parameters**
> **rule_name** (`str | None`) – Name of rule to return matching articles
>
> **Return type**
> *RSSitemsDictionary*

rss_move_item(*orig_item_path=None*, *new_item_path=None*, ***kwargs*) → None

Move/rename an RSS item (folder, feed, etc.).

> **Raises**
> *Conflict409Error* –
>
> **Parameters**
> - **orig_item_path** (`str | None`) – path to item to be removed (e.g. `Folder\Subfolder\ItemName`)
> - **new_item_path** (`str | None`) – path to item to be removed (e.g. `Folder\Subfolder\ItemName`)
>
> **Return type**
> None

rss_refresh_item(*item_path=None*, ***kwargs*) → None

Trigger a refresh for an RSS item.

Note: qBittorrent v4.1.5 through v4.1.8 all use Web API v2.2 but this endpoint was introduced with v4.1.8; so, behavior may be undefined for these versions.

> **Parameters**
> **item_path** (`str | None`) – path to item to be refreshed (e.g. `Folder\Subfolder\ItemName`)
>
> **Return type**
> None

rss_remove_item(*item_path=None*, ***kwargs*) → None

Remove an RSS item (folder, feed, etc.).

NOTE: Removing a folder also removes everything in it.

> **Raises**
>> `Conflict409Error` –
>
> **Parameters**
>> **item_path** (`str`|`None`) – path to item to be removed (e.g. `Folder\Subfolder\ItemName`)
>
> **Return type**
>> None

rss_remove_rule(*rule_name=None*, ***kwargs*) → None

Delete a RSS auto-downloading rule.

> **Parameters**
>> **rule_name** (`str` | `None`) – Name of rule to delete
>
> **Return type**
>> None

rss_rename_rule(*orig_rule_name=None*, *new_rule_name=None*, ***kwargs*) → None

Rename an RSS auto-download rule.

This method did not work properly until qBittorrent v4.3.0 (Web API v2.6).

> **Parameters**
>> • **orig_rule_name** (`str`|`None`) – current name of rule
>>
>> • **new_rule_name** (`str`|`None`) – new name for rule
>
> **Return type**
>> None

rss_rules(***kwargs*) → *RSSRulesDictionary*

Retrieve RSS auto-download rule definitions.

> **Return type**
>> *RSSRulesDictionary*

rss_set_feed_url(*url=None*, *item_path=None*, ***kwargs*) → None

Update the URL for an existing RSS feed.

This method was introduced with qBittorrent v4.6.0 (Web API v2.9.1).

> **Raises**
>> `Conflict409Error` –
>
> **Parameters**
>> • **url** (`str`|`None`) – URL of RSS feed (e.g. https://distrowatch.com/news/torrents.xml)
>>
>> • **item_path** (`str` | `None`) – Name and/or path for feed (e.g. `Folder\Subfolder\FeedName`)
>
> **Return type**
>> None

rss_set_rule(*rule_name=None*, *rule_def=None*, ***kwargs*) → None

Create a new RSS auto-downloading rule.

> **Parameters**

- **rule_name** (`str` | `None`) – name for new rule

- **rule_def** (`Mapping[str`, qbittorrentapi.definitions.JsonValueT]`|`None`) – dictionary with
  rule fields - https://github.com/qbittorrent/qBittorrent/wiki/WebUI-API-(qBittorrent-4.1)
  #user-content-set-auto-downloading-rule

> **Return type**
> > None

class RSS(*client*)

Allows interaction with RSS API endpoints.

> **Usage**
>
> ```
> >>> from qbittorrentapi import Client
> >>> client = Client(host="localhost:8080", username="admin", password=
> ↪"adminadmin")
> >>> # this is all the same attributes that are available as named in the
> >>> #  endpoints or the more pythonic names in Client (with or without
> ↪'log_' prepended)
> >>> rss_rules = client.rss.rules
> >>> client.rss.addFolder(folder_path="TPB")
> >>> client.rss.addFeed(url="...", item_path="TPB\Top100")
> >>> client.rss.remove_item(item_path="TPB") # deletes TPB and Top100
> >>> client.rss.set_rule(rule_name="...", rule_def={...})
> >>> items = client.rss.items.with_data
> >>> items_no_data = client.rss.items.without_data
> ```

> ### class Items(*args*, *client*, ***kwargs*)
>
> > **__call__**(*include_feed_data=None*, ***kwargs*) → *RSSitemsDictionary*
> >
> > > Implements *rss_items()*.

> > Download a .torrent file or magnet for a search plugin.
> >
> > This method was introduced with qBittorrent v5.0.0 (Web API v2.11).

> **Parameters**
>
> - **url** (str | None) – URL for .torrent file or magnet
>
> - **plugin** (str | None) – Name of the plugin
>
> **Return type**
> None

search_enable_plugin(*plugins=None*, *enable=None*, ***kwargs*) → None

> Enable or disable search plugin(s).
>
> This method was introduced with qBittorrent v4.1.4 (Web API v2.1.1).
>
> > **Parameters**
> >
> > - **plugins** (str | Iterable[str] | None) – list of plugin names
> >
> > - **enable** (bool | None) – Defaults to True if None or unset; use False to disable
> >
> > **Return type**
> > None

search_install_plugin(*sources=None*, ***kwargs*) → None

> Install search plugins from either URL or file.
>
> This method was introduced with qBittorrent v4.1.4 (Web API v2.1.1).
>
> > **Parameters**
> > **sources** (str | Iterable[str] | None) – list of URLs or filepaths
> >
> > **Return type**
> > None

search_plugins(***kwargs*) → *SearchPluginsList*

> Retrieve details of search plugins.
>
> This method was introduced with qBittorrent v4.1.4 (Web API v2.1.1).
>
> > **Return type**
> > *SearchPluginsList*

search_results(*search_id=None*, *limit=None*, *offset=None*, ***kwargs*) → *SearchResultsDictionary*

> Retrieve the results for the search.
>
> This method was introduced with qBittorrent v4.1.4 (Web API v2.1.1).
>
> > **Raises**
> >
> > - *NotFound404Error* –
> >
> > - *Conflict409Error* –
> >
> > **Parameters**
> >
> > - **search_id** (str | int | None) – ID of search job
> >
> > - **limit** (str | int | None) – number of results to return
> >
> > - **offset** (str | int | None) – where to start returning results
> >
> > **Return type**
> > *SearchResultsDictionary*

search_start(*pattern=None*, *plugins=None*, *category=None*, ***kwargs*) → *SearchJobDictionary*

    Start a search. Python must be installed. Host may limit number of concurrent searches.

    This method was introduced with qBittorrent v4.1.4 (Web API v2.1.1).

        Raises
            `Conflict409Error` –

        Parameters

- **pattern** (`str` | `None`) – term to search for
- **plugins** (`str` | `Iterable[str]` | `None`) – list of plugins to use for searching (supports 'all' and 'enabled')
- **category** (`str` | `None`) – categories to limit search; dependent on plugins. (supports 'all')

        Return type
            SearchJobDictionary

search_status(*search_id=None*, ***kwargs*) → *SearchStatusesList*

    Retrieve status of one or all searches.

    This method was introduced with qBittorrent v4.1.4 (Web API v2.1.1).

        Raises
            `NotFound404Error` –

        Parameters
            search_id (`str` | `int` | `None`) – ID of search to get status; leave empty for status of all jobs

        Return type
            SearchStatusesList

search_stop(*search_id=None*, ***kwargs*) → None

    Stop a running search.

    This method was introduced with qBittorrent v4.1.4 (Web API v2.1.1).

        Raises
            `NotFound404Error` –

        Parameters
            search_id (`str` | `int` | `None`) – ID of search job to stop

        Return type
            None

search_uninstall_plugin(*names=None*, ***kwargs*) → None

    Uninstall search plugins.

    This method was introduced with qBittorrent v4.1.4 (Web API v2.1.1).

        Parameters
            names (`str` | `Iterable[str]` | `None`) – names of plugins to uninstall

        Return type
            None

search_update_plugins(***kwargs*) → None

    Auto update search plugins.

    This method was introduced with qBittorrent v4.1.4 (Web API v2.1.1).

> **Return type**
>> None

class Search(**args*, *client*, ***kwargs*)

> Allows interaction with Search API endpoints.

> **Usage**

```
>>> from qbittorrentapi import Client
>>> client = Client(host="localhost:8080", username="admin", password=
↪"adminadmin")
>>> # this is all the same attributes that are available as named in the
>>> #  endpoints or the more pythonic names in Client (with or without

Sync

class SyncAPIMixIn(*host=None*, *port=None*, *username=None*, *password=None*, *EXTRA_HEADERS=None*, *REQUESTS_ARGS=None*, *HTTPADAPTER_ARGS=None*, *VERIFY_WEBUI_CERTIFICATE=True*, *FORCE_SCHEME_FROM_HOST=False*, *RAISE_NOTIMPLEMENTEDERROR_FOR_UNIMPLEMENTED_API_ENDPOINTS=False*, *RAISE_ERROR_FOR_UNSUPPORTED_QBITTORRENT_VERSIONS=False*, *VERBOSE_RESPONSE_LOGGING=False*, *SIMPLE_RESPONSES=False*, *DISABLE_LOGGING_DEBUG_OUTPUT=False*) → None

> Bases: *AppAPIMixIn*
>
> Implementation of all Sync API Methods.

Usage

```
>>> from qbittorrentapi import Client
>>> client = Client(host="localhost:8080", username="admin", password=
↪"adminadmin")
>>> maindata = client.sync_maindata(rid="...")
>>> torrent_peers = client.sync_torrent_peers(torrent_hash="...", rid=".
↪..")
```

sync_maindata(*rid=0*, ***kwargs*) → *SyncMainDataDictionary*

    Retrieves sync data.

        Parameters

            rid (`str` | `int`) – response ID

        Return type

            SyncMainDataDictionary

sync_torrent_peers(*torrent_hash=None*, *rid=0*, ***kwargs*) → *SyncTorrentPeersDictionary*

    Retrieves torrent sync data.

        Raises

            NotFound404Error –

        Parameters

- **torrent_hash** (`str` | `None`) – hash for torrent
- **rid** (`str` | `int`) – response ID

        Return type

            SyncTorrentPeersDictionary

class Sync(*client*) → None

    Allows interaction with the Sync API endpoints.

    Usage:

```
>>> from qbittorrentapi import Client
>>> client = Client(host="localhost:8080", username="admin", password=
↪"adminadmin")
>>> # these are all the same attributes that are available as named in the
>>> #  endpoints or the more pythonic names in Client (with or without 'sync_'
↪prepended)
>>> maindata = client.sync.maindata(rid="...")
>>> # for use when continuously calling maindata for changes in torrents
>>> # this will automatically request the changes since the last call
>>> md = client.sync.maindata.delta()
>>> #
>>> torrentPeers = client.sync.torrentPeers(torrent_hash="...", rid="...")
>>> torrent_peers = client.sync.torrent_peers(torrent_hash="...", rid="...")
```

class MainData(*client*) → None

    __call__(*rid=0*, ***kwargs*) → *SyncMainDataDictionary*

        Call self as a function.

            Return type

                SyncMainDataDictionary

delta(***kwargs*) → *SyncMainDataDictionary*

> Implements *sync_maindata()* to return updates since last call.
>> **Return type**
>>> *SyncMainDataDictionary*

reset_rid() → None

> Resets RID so the next request includes everything.
>> **Return type**
>>> None

class TorrentPeers(*client*) → None

__call__(*torrent_hash=None*, *rid=0*, ***kwargs*) → *SyncTorrentPeersDictionary*

> Implements *sync_torrent_peers()*.
>> **Return type**
>>> *SyncTorrentPeersDictionary*

delta(*torrent_hash=None*, ***kwargs*) → *SyncTorrentPeersDictionary*

> Implements *sync_torrent_peers()* to return updates since last call.
>> **Return type**
>>> *SyncTorrentPeersDictionary*

reset_rid() → None

> Resets RID so the next request includes everything.
>> **Return type**
>>> None

property maindata: *MainData*

Torrent Creator

class TorrentCreatorAPIMixIn(*host=None*, *port=None*, *username=None*, *password=None*, *EXTRA_HEADERS=None*, *REQUESTS_ARGS=None*, *HTTPADAPTER_ARGS=None*, *VERIFY_WEBUI_CERTIFICATE=True*, *FORCE_SCHEME_FROM_HOST=False*, *RAISE_NOTIMPLEMENTEDERROR_FOR_UNIMPLEMENTED_API_ENDPOINTS=False*, *RAISE_ERROR_FOR_UNSUPPORTED_QBITTORRENT_VERSIONS=False*, *VERBOSE_RESPONSE_LOGGING=False*, *SIMPLE_RESPONSES=False*, *DISABLE_LOGGING_DEBUG_OUTPUT=False*) → None

Bases: *AppAPIMixIn*

Implementation of all TorrentCreator API methods.

> **Usage**
>
> ```
> >>> from qbittorrentapi import Client
> >>> client = Client(host="localhost:8080", username="admin", password=
> →"adminadmin")
> >>> task = client.torrentcreator_add_task(source_path="/path/to/data")
> >>> if TaskStatus(task.status().status) == TaskStatus.FINISHED:
> >>>     torrent_data = task.torrent_file()
> >>> task.delete()
> >>> # or
> >>> client.torrentcreator_delete_task(task_id=task.taskID)
> ```

torrentcreator_add_task(*source_path=None*, *torrent_file_path=None*, *format=None*, *start_seeding=None*, *is_private=None*, *optimize_alignment=None*, *padded_file_size_limit=None*, *piece_size=None*, *comment=None*, *trackers=None*, *url_seeds=None*, ***kwargs*) → *TorrentCreatorTaskDictionary*

> Add a task to create a new torrent.
>
> This method was introduced with qBittorrent v5.0.0 (Web API v2.10.4).
>
> **Raises**
> > *Conflict409Error* – too many existing torrent creator tasks
>
> **Parameters**
> > - **source_path** (str | PathLike[Any] | None) – source file path for torrent content
> >
> > - **torrent_file_path** (str | PathLike[Any] | None) – file path to save torrent
> >
> > - **format** (Literal['v1', 'v2', 'hybrid'] | None) – BitTorrent V1 or V2; defaults to "hybrid" format if None
> >
> > - **start_seeding** (bool | None) – should qBittorrent start seeding this torrent?
> >
> > - **is_private** (bool | None) – is the torrent private or not?
> >
> > - **optimize_alignment** (bool | None) – should optimized alignment be enforced for new torrent?
> >
> > - **padded_file_size_limit** (int | None) – size limit for padding files
> >
> > - **piece_size** (int | None) – size of the pieces
> >
> > - **comment** (str | None) – comment
> >
> > - **trackers** (str | list[str] | None) – list of trackers to add
> >
> > - **url_seeds** (str | list[str] | None) – list of URLs seeds to add

Return type
    TorrentCreatorTaskDictionary

torrentcreator_delete_task(*task_id=None*, ***kwargs*) → None

    Delete a torrent creation task.

    This method was introduced with qBittorrent v5.0.0 (Web API v2.10.4).

    Raises
        NotFound404Error – task not found

    Parameters
        task_id (str | None) – ID of torrent creation task

    Return type
        None

torrentcreator_status(*task_id=None*, ***kwargs*) → *TorrentCreatorTaskStatusList*

    Status for a torrent creation task.

    This method was introduced with qBittorrent v5.0.0 (Web API v2.10.4).

    Raises
        NotFound404Error – task not found

    Parameters
        task_id (str | None) – ID of torrent creation task

    Return type
        TorrentCreatorTaskStatusList

torrentcreator_torrent_file(*task_id=None*, ***kwargs*) → bytes

    Retrieve torrent file for created torrent.

    This method was introduced with qBittorrent v5.0.0 (Web API v2.10.4).

    Raises
        • *NotFound404Error* – task not found

        • *Conflict409Error* – torrent creation is not finished or failed

    Parameters
        task_id (str | None) – ID of torrent creation task

    Return type
        bytes

class TorrentCreator(**args*, *client*, ***kwargs*)

    Allows interaction with `TorrentCreator` API endpoints.

    Usage

```
>>> from qbittorrentapi import Client
>>> client = Client(host="localhost:8080", username="admin", password=
↪"adminadmin")
>>> # this is all the same attributes that are available as named in the
>>> #  endpoints or the more pythonic names in Client (with or without
↪'torrentcreator_' prepended)
>>> task = client.torrentcreator.add_task(source_path="/path/to/data")
>>> if TaskStatus(task.status().status) == TaskStatus.FINISHED:
>>>     torrent_data = task.torrent_file()
```

(continues on next page)

```
>>> task.delete()
>>> # or
>>> client.torrentcreator.delete_task(task_id=task.taskID)
```

add_task(*source_path=None*, *torrent_file_path=None*, *format=None*, *start_seeding=None*, *is_private=None*, *optimize_alignment=None*, *padded_file_size_limit=None*, *piece_size=None*, *comment=None*, *trackers=None*, *url_seeds=None*, ***kwargs*) → *TorrentCreatorTaskDictionary*

Implements *torrentcreator_add_task()*.

> **Return type**
> *TorrentCreatorTaskDictionary*

delete_task(*task_id=None*, ***kwargs*) → None

class TorrentCreatorTaskStatus(*data=None*, ***kwargs*)

Bases: *ListEntry*

Item in *TorrentCreatorTaskStatusList*

Definition: not documented... yet

---

class TaskStatus(*value*, *names=<not given>*, **values*, *module=None*, *qualname=None*, *type=None*, *start=1*, *boundary=None*)

    Bases: [Enum](#)

    Enumeration of possible task statuses.

    FAILED = 'Failed'

    FINISHED = 'Finished'

    QUEUED = 'Queued'

    RUNNING = 'Running'

class TorrentCreatorTaskStatusList(*list_entries*, *client=None*)

    Bases: *[List](#)*[*[TorrentCreatorTaskStatus](#)*]

    Response for *[torrentcreator_status()](#)*

Torrents

class TorrentsAPIMixIn(*host=None*, *port=None*, *username=None*, *password=None*, *EXTRA_HEADERS=None*, *REQUESTS_ARGS=None*, *HTTPADAPTER_ARGS=None*, *VERIFY_WEBUI_CERTIFICATE=True*, *FORCE_SCHEME_FROM_HOST=False*, *RAISE_NOTIMPLEMENTEDERROR_FOR_UNIMPLEMENTED_API_ENDPOINTS=False*, *RAISE_ERROR_FOR_UNSUPPORTED_QBITTORRENT_VERSIONS=False*, *VERBOSE_RESPONSE_LOGGING=False*, *SIMPLE_RESPONSES=False*, *DISABLE_LOGGING_DEBUG_OUTPUT=False*) → [None](#)

    Bases: *[AppAPIMixIn](#)*

    Implementation of all Torrents API methods.

    Usage

```
>>> from qbittorrentapi import Client
>>> client = Client(host="localhost:8080", username="admin", password=
→"adminadmin")
>>> client.torrents_add(urls="...")
>>> client.torrents_reannounce()
```

    torrents_add(*urls=None*, *torrent_files=None*, *save_path=None*, *cookie=None*, *category=None*, *is_skip_checking=None*, *is_paused=None*, *is_root_folder=None*, *rename=None*, *upload_limit=None*, *download_limit=None*, *use_auto_torrent_management=None*, *is_sequential_download=None*, *is_first_last_piece_priority=None*, *tags=None*, *content_layout=None*, *ratio_limit=None*, *seeding_time_limit=None*, *download_path=None*, *use_download_path=None*, *stop_condition=None*, *add_to_top_of_queue=None*, *inactive_seeding_time_limit=None*, *share_limit_action=None*, *ssl_certificate=None*, *ssl_private_key=None*, *ssl_dh_params=None*, *is_stopped=None*, *forced=None*, ***kwargs*) → [str](#)

    Add one or more torrents by URLs and/or torrent files.

    Returns `Ok.` for success and `Fails.` for failure.

        Raises

            • *[UnsupportedMediaType415Error](#)* – if file is not a valid torrent file

            • *[TorrentFileNotFoundError](#)* – if a torrent file doesn't exist

- *TorrentFilePermissionError* – if read permission is denied to torrent file

Parameters

- **urls** (str | Iterable[str] | None) – single instance or an iterable of URLs (http://, https://, magnet:, bc://bt/)

- **torrent_files** (TypeVar(TorrentFilesT, bytes, str, IO[bytes], Mapping[str, bytes | str | IO[bytes]], Iterable[bytes | str | IO[bytes]]) | None) – several options are available to send torrent files to qBittorrent:

  - single instance of bytes: useful if torrent file already read from disk or downloaded from internet.

  - single instance of file handle to torrent file: use open(<filepath>, 'rb') to open the torrent file.

  - single instance of a filepath to torrent file: e.g. /home/user/torrent_filename.torrent

  - an iterable of the single instances above to send more than one torrent file

  - dictionary with key/value pairs of torrent name and single instance of above object

  Note: The torrent name in a dictionary is useful to identify which torrent file errored. qBittorrent provides back that name in the error text. If a torrent name is not provided, then the name of the file will be used. And in the case of bytes (or if filename cannot be determined), the value 'torrent__n' will be used.

- **save_path** (str | None) – location to save the torrent data

- **cookie** (str | None) – cookie(s) to retrieve torrents by URL

- **category** (str | None) – category to assign to torrent(s)

- **is_skip_checking** (bool | None) – True to skip hash checking

- **is_paused** (bool | None) – Adds torrent in stopped state; alias for is_stopped

- **is_root_folder** (bool | None) – True or False to create root folder (superseded by content_layout with v4.3.2)

- **rename** (str | None) – new name for torrent(s)

- **upload_limit** (str | int | None) – upload limit in bytes/second

- **download_limit** (str | int | None) – download limit in bytes/second

- **use_auto_torrent_management** (bool | None) – True or False to use automatic torrent management

- **is_sequential_download** (bool | None) – True or False for sequential download

- **is_first_last_piece_priority** (bool | None) – True or False for first and last piece download priority

- **tags** (str | Iterable[str] | None) – tag(s) to assign to torrent(s) (added in Web API v2.6.2)

- **content_layout** (Literal['Original', 'Subfolder', 'NoSubfolder'] | None) – Original, Subfolder, or NoSubfolder to control filesystem structure for content (added in Web API v2.7)

- **ratio_limit** (str | float | None) – share limit as ratio of upload amt over download amt; e.g. 0.5 or 2.0 (added in Web API v2.8.1)

- **seeding_time_limit** (`str` | `int` | `None`) – number of minutes to seed torrent (added in Web API v2.8.1)

- **download_path** (`str` | `None`) – location to download torrent content before moving to `save_path` (added in Web API v2.8.4)

- **use_download_path** (`bool` | `None`) – `True` or `False` whether `download_path` should be used... defaults to `True` if `download_path` is specified (added in Web API v2.8.4)

- **stop_condition** (`Literal['MetadataReceived', 'FilesChecked'] | None`) – `MetadataReceived` or `FilesChecked` to stop the torrent when started automatically (added in Web API v2.8.15)

- **add_to_top_of_queue** (`bool` | `None`) – puts torrent at top to the queue(added in Web API v2.8.19)

- **inactive_seeding_time_limit** (`str` | `int` | `None`) – limit for seeding while inactive (added in Web API v2.9.2)

- **share_limit_action** (`Literal['Stop', 'Remove', 'RemoveWithContent', 'EnableSuperSeeding'] | None`) – override default action when share limit is reached (added in Web API v2.10.4)

- **ssl_certificate** (`str` | `None`) – peer certificate (in PEM format) (added in Web API v2.10.4)

- **ssl_private_key** (`str` | `None`) – peer private key (added in Web API v2.10.4)

- **ssl_dh_params** (`str` | `None`) – Diffie-Hellman parameters (added in Web API v2.10.4)

- **is_stopped** (`bool` | `None`) – Adds torrent in stopped state; alias for `is_paused` (added in Web API v2.11.0)

- **forced** (`bool` | `None`) – add torrent in forced state (added in Web API v2.11.0)

> **Return type**
> [str](#)

torrents_add_peers(*peers=None*, *torrent_hashes=None*, ***kwargs*) → *TorrentsAddPeersDictionary*

> Add one or more peers to one or more torrents.
>
> This method was introduced with qBittorrent v4.4.0 (Web API v2.3.0).
>
> > **Raises**
> > [*InvalidRequest400Error*](#) – for invalid peers
> >
> > **Parameters**
> >
> > - **peers** (`str` | `Iterable[str]` | `None`) – one or more peers to add. each peer should take the form 'host:port'
> >
> > - **torrent_hashes** (`str` | `Iterable[str]` | `None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
> >
> > **Return type**
> > [*TorrentsAddPeersDictionary*](#)

torrents_add_tags(*tags=None*, *torrent_hashes=None*, ***kwargs*) → [None](#)

> Add one or more tags to one or more torrents.
>
> Note: Tags that do not exist will be created on-the-fly.
>
> This method was introduced with qBittorrent v4.2.0 (Web API v2.3.0).
>
> > **Parameters**

- **tags** (`str` | `Iterable`[`str`] | `None`) – tag name or list of tags
- **torrent_hashes** (`str` | `Iterable`[`str`] | `None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.

> **Return type**
>   `None`

torrents_add_trackers(*torrent_hash=None*, *urls=None*, ***kwargs*) → `None`

    Add trackers to a torrent.

> **Raises**
>   *NotFound404Error* –
>
> **Parameters**
>
> - **torrent_hash** (`str` | `None`) – hash for torrent
> - **urls** (`str` | `Iterable`[`str`] | `None`) – tracker URLs to add to torrent
>
> **Return type**
>   `None`

torrents_add_webseeds(*torrent_hash=None*, *urls=None*, ***kwargs*) → `None`

    Add webseeds to a torrent.

> **Raises**
>
> - *NotFound404Error* – torrent not found
> - *InvalidRequest400Error* – invalid URL
>
> **Parameters**
>
> - **torrent_hash** (`str` | `None`) – hash for torrent
> - **urls** (`str` | `Iterable`[`str`] | `None`) – list of webseed URLs to add to torrent
>
> **Return type**
>   `None`

torrents_bottom_priority(*torrent_hashes=None*, ***kwargs*) → `None`

    Set torrent as lowest priority. Torrent Queuing must be enabled.

> **Raises**
>   *Conflict409Error* –
>
> **Parameters**
>   **torrent_hashes** (`str`|`Iterable`[`str`]|`None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
>
> **Return type**
>   `None`

torrents_categories(***kwargs*) → *TorrentCategoriesDictionary*

    Retrieve all category definitions.

    This method was introduced with qBittorrent v4.1.4 (Web API v2.1.1).

    Note: `torrents/categories` is not available until v2.1.0

> **Return type**
>   *TorrentCategoriesDictionary*

torrents_count() → int

> Retrieve count of torrents.
>
> > **Return type**
> > int

torrents_create_category(*name=None*, *save_path=None*, *download_path=None*, *enable_download_path=None*, ***kwargs*) → None

> Create a new torrent category.
>
> > **Raises**
> > `Conflict409Error` – if category name is not valid or unable to create
> >
> > **Parameters**
> >
> > - **name** (str | None) – name for new category
> >
> > - **save_path** (str | None) – location to save torrents for this category (added in Web API 2.1.0)
> >
> > - **download_path** (str | None) – download location for torrents with this category
> >
> > - **enable_download_path** (bool | None) – True or False to enable or disable download path
> >
> > **Return type**
> > None

torrents_create_tags(*tags=None*, ***kwargs*) → None

> Create one or more tags.
>
> This method was introduced with qBittorrent v4.2.0 (Web API v2.3.0).
>
> > **Parameters**
> > **tags** (str | Iterable[str] | None) – tag name or list of tags
> >
> > **Return type**
> > None

torrents_decrease_priority(*torrent_hashes=None*, ***kwargs*) → None

> Decrease the priority of a torrent. Torrent Queuing must be enabled.
>
> > **Raises**
> > `Conflict409Error` –
> >
> > **Parameters**
> > **torrent_hashes** (str|Iterable[str]|None) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
> >
> > **Return type**
> > None

torrents_delete(*delete_files=False*, *torrent_hashes=None*, ***kwargs*) → None

> Remove a torrent from qBittorrent and optionally delete its files.
>
> > **Parameters**
> >
> > - **torrent_hashes** (str | Iterable[str] | None) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
> >
> > - **delete_files** (bool | None) – True to delete the torrent's files
> >
> > **Return type**
> > None

torrents_delete_tags(*tags=None*, ***kwargs*) → None

> Delete one or more tags.
>
> This method was introduced with qBittorrent v4.2.0 (Web API v2.3.0).
>
> > **Parameters**
> > > **tags** (str | Iterable[str] | None) – tag name or list of tags
> >
> > **Return type**
> > > None

torrents_download_limit(*torrent_hashes=None*, ***kwargs*) → *TorrentLimitsDictionary*

> Retrieve the download limit for one or more torrents.
>
> > **Return type**
> > > *TorrentLimitsDictionary*

torrents_edit_category(*name=None*, *save_path=None*, *download_path=None*,
   enable_download_path=None, ***kwargs*) → None

> Edit an existing category.
>
> This method was introduced with qBittorrent v4.1.3 (Web API v2.1.0).
>
> > **Raises**
> > > *Conflict409Error* – if category name is not valid or unable to create
> >
> > **Parameters**

> > > - **save_path** (str | None) – new location to save files for this category
> > > - **download_path** (str | None) – download location for torrents with this category
> > > - **enable_download_path** (bool | None) – True or False to enable or disable download path
> >
> > **Return type**
> > > None

torrents_edit_tracker(*torrent_hash=None*, *original_url=None*, *new_url=None*, ***kwargs*) → None

> Replace a torrent's tracker with a different one.
>
> This method was introduced with qBittorrent v4.1.4 (Web API v2.2.0).
>
> > **Raises**
> > > - *InvalidRequest400Error* –
> > > - *NotFound404Error* –
> > > - *Conflict409Error* –
> >
> > **Parameters**
> > > - **torrent_hash** (str | None) – hash for torrent
> > > - **original_url** (str | None) – URL for existing tracker
> > > - **new_url** (str | None) – new URL to replace
> >
> > **Return type**
> > > None

torrents_edit_webseed(*torrent_hash=None*, *orig_url=None*, *new_url=None*, ***kwargs*) → None

Edit a webseed for a torrent.

> **Raises**
>
> - *NotFound404Error* – torrent not found
>
> - *Conflict409Error* – `orig_url` is not a webseed for the torrent
>
> - *InvalidRequest400Error* – invalid URL
>
> **Parameters**
>
> - **torrent_hash** (`str` | `None`) – hash for torrent
>
> - **orig_url** (`str` | `None`) – webseed URL to be replaced
>
> - **new_url** (`str` | `None`) – webseed URL to replace with
>
> **Return type**
>
> None

torrents_export(*torrent_hash=None*, ***kwargs*) → bytes

Export a .torrent file for the torrent.

This method was introduced with qBittorrent v4.5.0 (Web API v2.8.14).

> **Raises**
>
> - *NotFound404Error* – torrent not found
>
> - *Conflict409Error* – unable to export .torrent file
>
> **Parameters**
>
> **torrent_hash** (`str` | `None`) – hash for torrent
>
> **Return type**
>
> bytes

torrents_file_priority(*torrent_hash=None*, *file_ids=None*, *priority=None*, ***kwargs*) → None

Set priority for one or more files.

> **Raises**
>
> - *InvalidRequest400Error* – if priority is invalid or at least one file ID is not an integer
>
> - *NotFound404Error* –
>
> - *Conflict409Error* – if torrent metadata has not finished downloading or at least one file was not found
>
> **Parameters**
>
> - **torrent_hash** (`str` | `None`) – hash for torrent
>
> - **file_ids** (`str` | `int` | `Iterable`[`str` | `int`] | `None`) – single file ID or a list.
>
> - **priority** (`str` | `int` | `None`) – priority for file(s) - https://github.com/qbittorrent/qBittorrent/wiki/WebUI-API-(qBittorrent-4.1)#user-content-set-file-priority
>
> **Return type**
>
> None

torrents_files(*torrent_hash=None*, ***kwargs*) → *TorrentFilesList*

Retrieve individual torrent's files.

> **Raises**
>> *NotFound404Error* –
>
> **Parameters**
>> **torrent_hash** (str | None) – hash for torrent
>
> **Return type**
>> *TorrentFilesList*

torrents_increase_priority(*torrent_hashes=None*, ***kwargs*) → None

> Increase the priority of a torrent. Torrent Queuing must be enabled.
>
>> **Raises**
>>> *Conflict409Error* –
>>
>> **Parameters**
>>> **torrent_hashes** (str | Iterable[str] | None) – single torrent hash or list of torrent hashes. Or all for all torrents.
>>
>> **Return type**
>>> None

torrents_info(*status_filter=None*, *category=None*, *sort=None*, *reverse=None*, *limit=None*, *offset=None*, *torrent_hashes=None*, *tag=None*, *private=None*, *include_trackers=None*, ***kwargs*) → *TorrentInfoList*

> Retrieves list of info for torrents.
>
>> **Parameters**
>>
>> - **status_filter** (Literal['all', 'downloading', 'seeding', 'completed', 'paused', 'stopped', 'active', 'inactive', 'resumed', 'running', 'stalled', 'stalled_uploading', 'stalled_downloading', 'checking', 'moving', 'errored'] | None) – Filter list by torrent status:
>>
>>   - Original options: all, downloading, seeding, completed, paused, active, inactive, resumed, errored
>>
>>   - Added in Web API v2.4.1: stalled, stalled_uploading, and stalled_downloading
>>
>>   - Added in Web API v2.8.4: checking
>>
>>   - Added in Web API v2.8.18: moving
>>
>>   - Added in Web API v2.11.0: stopped (replaced paused), running (replaced resumed)
>>
>> - **category** (str | None) – Filter list by category
>>
>> - **sort** (str | None) – Sort list by any property returned
>>
>> - **reverse** (bool | None) – Reverse sorting
>>
>> - **limit** (str | int | None) – Limit length of list
>>
>> - **offset** (str | int | None) – Start of list (if < 0, offset from end of list)
>>
>> - **torrent_hashes** (str | Iterable[str] | None) – Filter list by hash (separate multiple hashes with a '|') (added in Web API v2.0.1)
>>
>> - **tag** (str | None) – Filter list by tag (empty string means "untagged"; no "tag" parameter means "any tag"; added in Web API v2.8.3)
>>
>> - **private** (bool | None) – Filter list by private flag - use None to ignore; (added in Web API v2.11.1)

• **include_trackers** ([bool](#) | [None](#)) – Include trackers in response; default False; (added in Web API v2.11.4)

> **Return type**
> [*TorrentInfoList*](#)

torrents_pause(*torrent_hashes=None*, ***kwargs*) → [None](#)

> Stop one or more torrents in qBittorrent.
>
> > **Parameters**
> > **torrent_hashes** ([str](#)|[Iterable](#)[[str](#)]|[None](#)) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
> >
> > **Return type**
> > [None](#)

torrents_piece_hashes(*torrent_hash=None*, ***kwargs*) → [*TorrentPieceInfoList*](#)

> Retrieve individual torrent's pieces' hashes.
>
> > **Raises**
> > [*NotFound404Error*](#) –
> >
> > **Parameters**
> > **torrent_hash** ([str](#) | [None](#)) – hash for torrent
> >
> > **Return type**
> > [*TorrentPieceInfoList*](#)

torrents_piece_states(*torrent_hash=None*, ***kwargs*) → [*TorrentPieceInfoList*](#)

> Retrieve individual torrent's pieces' states.
>
> > **Raises**
> > [*NotFound404Error*](#) –
> >
> > **Parameters**
> > **torrent_hash** ([str](#) | [None](#)) – hash for torrent
> >
> > **Return type**
> > [*TorrentPieceInfoList*](#)

torrents_properties(*torrent_hash=None*, ***kwargs*) → [*TorrentPropertiesDictionary*](#)

> Retrieve individual torrent's properties.
>
> > **Raises**
> > [*NotFound404Error*](#) –
> >
> > **Parameters**
> > **torrent_hash** ([str](#) | [None](#)) – hash for torrent
> >
> > **Return type**
> > [*TorrentPropertiesDictionary*](#)

torrents_reannounce(*torrent_hashes=None*, ***kwargs*) → [None](#)

> Reannounce a torrent.
>
> This method was introduced with qBittorrent v4.1.2 (Web API v2.0.2).
>
> > **Parameters**
> > **torrent_hashes** ([str](#)|[Iterable](#)[[str](#)]|[None](#)) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
> >
> > **Return type**
> > [None](#)

torrents_recheck(*torrent_hashes=None*, ***kwargs*) → None

Recheck a torrent in qBittorrent.

> **Parameters**
>> **torrent_hashes** (str|Iterable[str]|None) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
>
> **Return type**
>> None

torrents_remove_categories(*categories=None*, ***kwargs*) → None

Delete one or more categories.

> **Parameters**
>> **categories** (str | Iterable[str] | None) – categories to delete
>
> **Return type**
>> None

torrents_remove_tags(*tags=None*, *torrent_hashes=None*, ***kwargs*) → None

Add one or more tags to one or more torrents.

This method was introduced with qBittorrent v4.2.0 (Web API v2.3.0).

> **Parameters**
>> - **tags** (str | Iterable[str] | None) – tag name or list of tags
>> - **torrent_hashes** (str | Iterable[str] | None) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
>
> **Return type**
>> None

torrents_remove_trackers(*torrent_hash=None*, *urls=None*, ***kwargs*) → None

Remove trackers from a torrent.

This method was introduced with qBittorrent v4.1.4 (Web API v2.2.0).

> **Raises**
>> - *NotFound404Error* –
>> - *Conflict409Error* –
>
> **Parameters**
>> - **torrent_hash** (str | None) – hash for torrent
>> - **urls** (str | Iterable[str] | None) – tracker URLs to removed from torrent
>
> **Return type**
>> None

torrents_remove_webseeds(*torrent_hash=None*, *urls=None*, ***kwargs*) → None

Remove webseeds from a torrent.

> **Raises**
>> - *NotFound404Error* –
>> - *InvalidRequest400Error* – invalid URL
>
> **Parameters**
>> - **torrent_hash** (str | None) – hash for torrent

- **urls** (`str` | `Iterable[str]` | `None`) – list of webseed URLs to add to torrent

> **Return type**
> None

torrents_rename(*torrent_hash=None*, *new_torrent_name=None*, ***kwargs*) → None

Rename a torrent.

> **Raises**
> *NotFound404Error* –
>
> **Parameters**
>
> - **torrent_hash** (`str` | `None`) – hash for torrent
>
> - **new_torrent_name** (`str` | `None`) – new name for torrent
>
> **Return type**
> None

torrents_rename_file(*torrent_hash=None*, *file_id=None*, *new_file_name=None*, *old_path=None*, *new_path=None*, ***kwargs*) → None

Rename a torrent file.

This method was introduced with qBittorrent v4.2.1 (Web API v2.4.0).

> **Raises**
>
> - *MissingRequiredParameters400Error* –
>
> - *NotFound404Error* –
>
> - *Conflict409Error* –
>
> **Parameters**
>
> - **torrent_hash** (`str` | `None`) – hash for torrent
>
> - **file_id** (`str` | `int` | `None`) – id for file (removed in Web API v2.7)
>
> - **new_file_name** (`str` | `None`) – new name for file (removed in Web API v2.7)
>
> - **old_path** (`str` | `None`) – path of file to rename (added in Web API v2.7)
>
> - **new_path** (`str` | `None`) – new path of file to rename (added in Web API v2.7)
>
> **Return type**
> None

torrents_rename_folder(*torrent_hash=None*, *old_path=None*, *new_path=None*, ***kwargs*) → None

Rename a torrent folder.

This method was introduced with qBittorrent v4.3.2 (Web API v2.7).

> **Raises**
>
> - *MissingRequiredParameters400Error* –
>
> - *NotFound404Error* –
>
> - *Conflict409Error* –
>
> **Parameters**
>
> - **torrent_hash** (`str` | `None`) – hash for torrent
>
> - **old_path** (`str` | `None`) – path of file to rename (added in Web API v2.7)

- **new_path** (`str` | `None`) – new path of file to rename (added in Web API v2.7)

> **Return type**
> `None`

torrents_resume(*torrent_hashes=None*, ***kwargs*) → `None`

> Start one or more torrents in qBittorrent.
>
> **Parameters**
> **torrent_hashes** (`str`|`Iterable[str]`|`None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
>
> **Return type**
> `None`

torrents_set_auto_management(*enable=None*, *torrent_hashes=None*, ***kwargs*) → `None`

> Enable or disable automatic torrent management for one or more torrents.
>
> **Parameters**
> - **torrent_hashes** (`str` | `Iterable[str]` | `None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
> - **enable** (`bool`|`None`) – Defaults to `True` if `None` or unset; use `False` to disable
>
> **Return type**
> `None`

torrents_set_category(*category=None*, *torrent_hashes=None*, ***kwargs*) → `None`

> Set a category for one or more torrents.
>
> **Raises**
> [`Conflict409Error`](#) – for bad category
>
> **Parameters**
> - **torrent_hashes** (`str` | `Iterable[str]` | `None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
> - **category** (`str`|`None`) – category to assign to torrent
>
> **Return type**
> `None`

torrents_set_download_limit(*limit=None*, *torrent_hashes=None*, ***kwargs*) → `None`

> Set the download limit for one or more torrents.
>
> **Parameters**
> - **torrent_hashes** (`str` | `Iterable[str]` | `None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
> - **limit** (`str`|`int`|`None`) – bytes/second (-1 sets the limit to infinity)
>
> **Return type**
> `None`

torrents_set_download_path(*download_path=None*, *torrent_hashes=None*, ***kwargs*) → `None`

> Set the Download Path for one or more torrents.
>
> This method was introduced with qBittorrent v4.4.0 (Web API v2.8.4).
>
> **Raises**
> - [`Forbidden403Error`](#) – cannot write to directory

- *Conflict409Error* – cannot create directory

    Parameters

    - **download_path** (`str` | `None`) – file path to save torrent contents before torrent finishes downloading

    - **torrent_hashes** (`str` | `Iterable[str]` | `None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.

    Return type
    None

torrents_set_force_start(*enable=None*, *torrent_hashes=None*, ***kwargs*) → *None*

Force start one or more torrents.

    Parameters

    - **torrent_hashes** (`str` | `Iterable[str]` | `None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.

    - **enable** (`bool` | `None`) – Defaults to `True` if `None` or unset; `False` is equivalent to *torrents_resume()*.

    Return type
    None

torrents_set_location(*location=None*, *torrent_hashes=None*, ***kwargs*) → *None*

Set location for torrents' files.

    Raises

    - *Forbidden403Error* – if the user doesn't have permissions to write to the location (only before v4.5.2 - write check was removed.)

    - *Conflict409Error* – if the directory cannot be created at the location

    Parameters

    - **torrent_hashes** (`str` | `Iterable[str]` | `None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.

    - **location** (`str` | `None`) – disk location to move torrent's files

    Return type
    None

torrents_set_save_path(*save_path=None*, *torrent_hashes=None*, ***kwargs*) → *None*

Set the Save Path for one or more torrents.

This method was introduced with qBittorrent v4.4.0 (Web API v2.8.4).

    Raises

    - *Forbidden403Error* – cannot write to directory

    - *Conflict409Error* – cannot create directory

    Parameters

    - **save_path** (`str` | `None`) – file path to save torrent contents

    - **torrent_hashes** (`str` | `Iterable[str]` | `None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.

> **Return type**
>> None

torrents_set_share_limits(*ratio_limit=None*, *seeding_time_limit=None*, *inactive_seeding_time_limit=None*, *torrent_hashes=None*, ***kwargs*) → None

> Set share limits for one or more torrents.
>
> This method was introduced with qBittorrent v4.1.1 (Web API v2.0.1).
>
>> **Parameters**
>>
>> - **torrent_hashes** (str | Iterable[str] | None) – single torrent hash or list of torrent hashes. Or all for all torrents.
>>
>> - **ratio_limit** (str | int | None) – max ratio to seed a torrent. (-2 means use the global value and -1 is no limit)
>>
>> - **seeding_time_limit** (str | int | None) – minutes (-2 means use the global value and -1 is no limit)
>>
>> - **inactive_seeding_time_limit** (str | int | None) – minutes (-2 means use the global value and -1 is no limit) (added in Web API v2.9.2)
>>
>> **Return type**
>>> None

torrents_set_super_seeding(*enable=None*, *torrent_hashes=None*, ***kwargs*) → None

> Set one or more torrents as super seeding.
>
>> **Parameters**
>>
>> - **torrent_hashes** (str | Iterable[str] | None) – single torrent hash or list of torrent hashes. Or all for all torrents.
>>
>> - **enable** (bool | None) – Defaults to True if None or unset; False to disable
>>
>> **Return type**
>>> None

torrents_set_tags(*tags=None*, *torrent_hashes=None*, ***kwargs*) → None

> Upsert one or more tags to one or more torrents.
>
> Note: Tags that do not exist will be created on-the-fly.
>
> This method was introduced with qBittorrent v5.1.0 (Web API v2.11.4).
>
>> **Parameters**
>>
>> - **tags** (str | Iterable[str] | None) – tag name or list of tags
>>
>> - **torrent_hashes** (str | Iterable[str] | None) – single torrent hash or list of torrent hashes. Or all for all torrents.
>>
>> **Return type**
>>> None

torrents_set_upload_limit(*limit=None*, *torrent_hashes=None*, ***kwargs*) → None

> Set the upload limit for one or more torrents.
>
>> **Parameters**
>>
>> - **torrent_hashes** (str | Iterable[str] | None) – single torrent hash or list of torrent hashes. Or all for all torrents.

- **limit** (`str` | `int` | `None`) – bytes/second (-1 sets the limit to infinity)

> **Return type**
>> `None`

torrents_start(*torrent_hashes=None*, ***kwargs*) → `None`

> Start one or more torrents in qBittorrent.

>> **Parameters**
>>> **torrent_hashes** (`str`|`Iterable[str]`|`None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.

>> **Return type**
>>> `None`

torrents_stop(*torrent_hashes=None*, ***kwargs*) → `None`

> Stop one or more torrents in qBittorrent.

>> **Parameters**
>>> **torrent_hashes** (`str`|`Iterable[str]`|`None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.

>> **Return type**
>>> `None`

torrents_tags(***kwargs*) → *TagList*

> Retrieve all tag definitions.

> This method was introduced with qBittorrent v4.2.0 (Web API v2.3.0).

>> **Return type**
>>> `TagList`

torrents_toggle_first_last_piece_priority(*torrent_hashes=None*, ***kwargs*) → `None`

> Toggle priority of first/last piece downloading.

>> **Parameters**
>>> **torrent_hashes** (`str`|`Iterable[str]`|`None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.

>> **Return type**
>>> `None`

torrents_toggle_sequential_download(*torrent_hashes=None*, ***kwargs*) → `None`

> Toggle sequential download for one or more torrents.

>> **Parameters**
>>> **torrent_hashes** (`str`|`Iterable[str]`|`None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.

>> **Return type**
>>> `None`

torrents_top_priority(*torrent_hashes=None*, ***kwargs*) → `None`

> Set torrent as highest priority. Torrent Queuing must be enabled.

>> **Raises**
>>> `Conflict409Error` –

>> **Parameters**
>>> **torrent_hashes** (`str`|`Iterable[str]`|`None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.

> **Return type**
>> None

torrents_trackers(*torrent_hash=None*, ***kwargs*) → *TrackersList*

> Retrieve individual torrent's trackers. Tracker status is defined in `TrackerStatus`.
>
> **Raises**
>> *NotFound404Error* –
>
> **Parameters**
>> **torrent_hash** (`str` | `None`) – hash for torrent
>
> **Return type**
>> *TrackersList*

torrents_upload_limit(*torrent_hashes=None*, ***kwargs*) → *TorrentLimitsDictionary*

> Retrieve the upload limit for one or more torrents.
>
> **Parameters**
>> **torrent_hashes** (`str`|`Iterable`[`str`]|`None`) – single torrent hash or list of torrent hashes. Or `all` for all torrents.
>
> **Return type**
>> *TorrentLimitsDictionary*

torrents_webseeds(*torrent_hash=None*, ***kwargs*) → *WebSeedsList*

> Retrieve individual torrent's web seeds.
>
> **Raises**
>> *NotFound404Error* – torrent not found
>
> **Parameters**
>> **torrent_hash** (`str` | `None`) – hash for torrent
>
> **Return type**
>> *WebSeedsList*

class Torrents(*client*) → None

> Allows interaction with the `Torrents` API endpoints.
>
> **Usage**
>
> ```
> >>> from qbittorrentapi import Client
> >>> client = Client(host="localhost:8080", username="admin", password=
> ↪"adminadmin")
> >>> # these are all the same attributes that are available as named in␣
> ↪the

class TorrentCategories(**args*, *client*, ***kwargs*)
Bases: *ClientCache*[*TorrentsAPIMixIn*]

Allows interaction with torrent categories within the Torrents API endpoints.

Usage

```
>>> from qbittorrentapi import Client
>>> client = Client(host="localhost:8080", username="admin", password=
↪"adminadmin")
>>> # these are all the same attributes that are available as named in
↪the
>>> #  endpoints or the more pythonic names in Client (with or without
↪'torrents_' prepended)
>>> categories = client.torrent_categories.categories
>>> # create or edit categories
>>> client.torrent_categories.create_category(name="Video", save_path="/
↪home/user/torrents/Video")
>>> client.torrent_categories.edit_category(name="Video", save_path="/
↪data/torrents/Video")
>>> # edit or create new by assignment
>>> client.torrent_categories.categories = dict(name="Video", save_path=
↪"/hone/user/")
>>> # delete categories
>>> client.torrent_categories.removeCategories(categories="Video")
>>> client.torrent_categories.removeCategories(categories=["Audio",
↪"ISOs"])
```
